FCRA Reg. No.: 231650820

12A No.: DI(E)/251/92/956

80G IT Exemption No.: DIT(E)/2009-10/ DELHE20593-21082009/1349

35AC IT Exemption No.: F.No. NC - 270/353/2004

Date : 23.03.2026
REF/ HF/BLR/ATP/2026/163

CERTIFICATE OF INTERNSHIP

This is to certify that **Ms. Asma Khatoon** bearing **Reg No: U18BL23C0008** a student of BET Sadathunnisa Degree College, has successfully completed an internship course for one month, at our Organization. During her internship, Ms. Asma Khatoon worked in Data Analytics (PowerBI) tasks and gained experience in the following areas:

- Introduction to PowerBI and Downloading PowerBI
- Creating a dashboard using visuals
- Analyse the dashboard using questions
- PowerBI basic visuals -Column chart, barchart, Line chart, maps,Table,matrix
- PowerBI Advanced AI visuals- Q&A Visuals , KPI,Decomposition Tree
- Conditional formatting, sorting and filters
- Model view(Relationship ,fact table and dimension table)
- Transform data(Power query Editor)-merge column, change data type
- DAX Query View(Power pivot)-new column, new measure, Quick measure.
- Tabs in power BI
- Evolve Career &Soft Skill session

Her conduct during her stay with us was satisfactory. We wish her all the best for her future endeavours.

Yours Truly,

HOPE FOUNDATION * BANGALORE BRANCH * REG No S/22367 OF 1991

Augustine T P
Sr.Program Director

ACKNOWLEDGEMENT

Iwouldliketo express my sincere gratitude to my trainer and institution for providing me the opportunity to learn Power BI and complete this project successfully. This course helped me to gain strong knowledge in data cleaning using Power Query, creating relationships between tables, building data models, and writing DAX measures such as Total Sales, MTD, and YTD.

Iam very thankful to my trainer for the continuous support, guidance, and encouragement throughout the course. The clear explanations, practical examples, and hands-on sessions helped me understand Power BI concepts easily and apply them in real-time projects.The trainer's valuable feedback and motivation helped me improve my report building and dashboard design skills.

Ialso extend my gratitude to my classmates and friends for their support, discussions, and cooperation during practice sessions. Their help and suggestions were useful in learning and solving errors during report creation.

Finally, I would like to thank my family for their encouragement, patience, and motivation, which helped me complete this course and project with confidence and dedication.

Name of the student
Asma Khatoon

CHAPTER 01

INTRODUCTION

Introduction About NGO:

What is an NGO?

NGO stands for Non-Governmental Organization.It'sanon-profitorganizationthat operates independently of the government, often focusing on social, environmental, or humanitarian causes.

Objectives of an NGO:

ThemainobjectivesofanNGOvary depending on its focus area, but common goals include:

1. Improving quality of life: Enhancing education, healthcare, and living standards.

2. Promoting human rights: Advocating for equality, justice, and dignity.

3. Environmental conservation: Protecting natural resources and promoting sustainability.

4. Disaster relief: Providing aid and support during emergencies.

5. Social welfare: Addressing poverty, inequality, and social injustices.

6. Empowering communities: Supporting marginalized groups and promoting participation.

7. Advocacy: Influencing policy and raising awareness on specific issues.

Conclusion:

NGOs play a vital role in addressing social, environmental, and humanitarian issues. They provide essential services, advocate for change, and empower communities. By working together with governments, individuals, and other organizations, NGOs contribute to creating a more just and equitable world. Their impact is significant, and their work is crucial for promoting positive change and improving lives.

CHAPTER 02

ORGANIZATION

INTRODUCTION TO THE HOPE FOUNDATION;

BACKGROUND:

The Hope Foundation is a non-governmental, non-profit organization committed to improving the lives of underprivileged communities, especially children, in India. Founded in 1999 by Maureen Forrest, the organization operates with the central mission of promoting human dignity through social development, access to education, healthcare, and livelihood opportunities. Headquartered in Kolkata, India, The Hope Foundation works tirelessly to bring positive change to the lives of streetconnected and slum-dwelling children who are often deprived of basic rights and opportunities.

Through a holistic and community-based approach, the Foundation emphasizes long-term development rather than short-term aid, ensuring sustainability and empowerment. It operates more than 60 projects, including protection homes, education centers, medical units, and vocational training institutes, impacting thousands of lives annually. In collaboration with local and international partners, The Hope Foundation continues to expand its reach and deepen its impact.

FUNCTIONS OF ORGANIZATION

Functions of the Hope Foundation

The **Hope Foundation**, established in 1999, is a registered non-governmental organization (NGO) committed to promoting the protection, education, and holistic development of street-connected and underprivileged children and families across India. The organization functions through a wide range of integrated programs and departments, all working together to bring sustainable change to the lives of vulnerable communities. Below is a comprehensive overview of the key functions of the Hope Foundation:

The HOPE Foundation is a registered non-sectarian charity that primarily focuses on providing a better future for underprivileged children, youth, and vulnerable individuals through holistic development

Functions under this department include:

1. Child Protection and Welfare

- Providing shelter, food, clothing, and healthcare.
- Rehabilitating children through emotional and psychological support.
- Reuniting children with their families where possible
  Facilitating legal adoptions through authorized agencies like CARA (Central Adoption Resource Authority).

2. Education and Child Development

- Operating schools and learning centers in urban slums and villages.
- Providing scholarships, tuition support, and school materials.
- Offering remedial classes and after-school programs.
- Ensuring child-friendly and gender-sensitive teaching environments.

3. Healthcare and Nutrition

- Conducting health check-ups, vaccinations, and emergency care.
- Treating common illnesses and referring severe cases to hospitals.
- Offering maternal and child health services.
- Distributing nutritious meals and supplements to children and families.

4. Livelihood and Skill Development

- Training in trades like nursing, retail, hospitality, beauty care, and tailoring.
- Providing soft skills and English language training.
- Organizing job placement drives and entrepreneurship workshops.
- Supporting start-ups with micro-loans and mentoring.

5. Community Development

- Building infrastructure such as toilets, schools, and community centers.
- Conducting awareness campaigns on hygiene, child rights, and gender equality.
- Providing clean water and promoting environmental sustainability.
- Supporting families affected by leprosy, HIV/AIDS, and disabilities.

6. Disaster Relief and Rehabilitation

- Distributing food, water, clothing, and medical aid.
- Setting up temporary shelters and education spaces.
- Providing trauma counseling and rebuilding infrastructure.
- Designing resilience-building programs post-disaster.

7. Mental Health and Psychosocial Support

- One-on-one counseling and therapy sessions
- Group workshops on emotional intelligence and coping mechanisms.
- Substance abuse prevention and rehabilitation programs.
- Training caregivers and teachers in mental health awareness.

8. Advocacy and Awareness

- Organizing events on child protection, education, and gender equality.
- Participating in national and international forums.
- Publishing research and case studies to inform policy change.
- Empowering children and youth to be their own advocates.

9. Monitoring, Evaluation, and Reporting

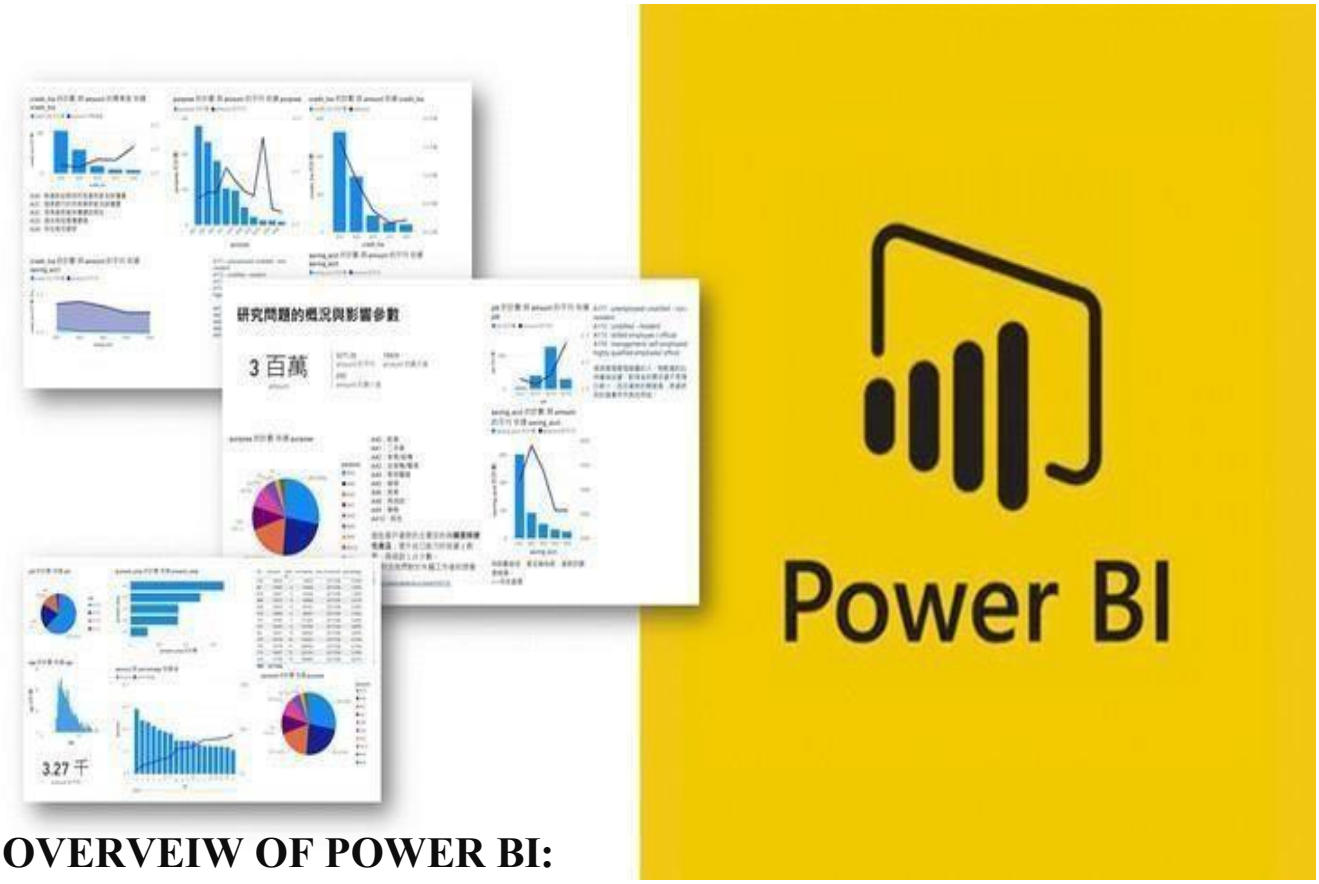

- Tracking project progress and impact metrics.
- Gathering data through surveys and community feedback.
- Preparing reports for stakeholders, including donors and partners. Adjusting programs based on outcomes and needs assessments.
-

10. Fundraising and Donor Management

- Organizing charity events, campaigns, and sponsorship drives.
- Writing grant proposals and donor communications.
- Maintaining donor databases and providing regular updates.
- Building long-term relationships with corporate and individual donors.

CHAPTER 3

INTRODUCTION OF POWER BI

OVERVEIW OF POWER BI:

Power BI is a Business Intelligence (BI) and data visualization tool developed by Microsoft. It is mainly used to convert raw data into meaningful insights through interactive reports and dashboards. Power BI helps organizations and users to analyze data quickly and make better decisions based on facts and trends.

Power BI supports data connections from multiple sources such as Excel, CSV, SQL Server, MySQL, Oracle, SharePoint, Web, Google Sheets, and cloud platforms. After importing the data, Power BI provides a strong feature called Power Query, which is used for cleaning and transforming data.

After data cleaning, Power BI allows users to create a proper Data Model. Data modeling means connecting different tables using relationships. For example, in a sales project, we can connect Sales table with Date table, Product table, and Customer table. A good data model improves performance and makes the report more accurate. Power BI also supports star schema modeling which is mostly used in real-time business dashboards.

Power BI provides a formula language called DAX (Data Analysis Expressions). DAX is used to create calculated columns and measures. Measures are very important in Power BI because they are dynamic and change according to filters and slicers. Using DAX, we can calculate Total Sales, Profit, Discount, MTD (Month To Date), YTD (Year To Date), Growth %, and many other calculations. Time intelligence functions like DATESMTD, DATESYTD, SAMEPERIODLASTYEAR are also used in DAX for year and month analysis.

KEY FEATURE OF POWER BI:

1. **Data Connectivity:** Connects to various data sources, such as Excel, SQL Server, Azure, and cloud services
2. **Data Modeling:** Allows users to create data models, defining relationships and perform data transformations.
3. **Visualizations:** Offers a wide range of visualization types, including charts, tables, maps, and more.
4. **Dashboards:** Enables users to create customized dashboards, combining multiple visualizations.
5. **Reporting:** Allows users to create and share reports, both within and outside the organization.
6. **Artificial Intelligence (AI):** Integrates AI capabilities, such as predictive analytics and machine learning.
   Real-time Data: Supports real-time data streaming and updates.
7. **Security:** Provides robust security features, including data encryption and access controls.
8. **Collaboration:** Enables users to share reports and dashboards, facilitating
9. collaboration.
10. **Mobile Accessibility:** Offers mobile apps for iOS, Android, and Windows, allowing users to access reports and dashboards on-the-go.

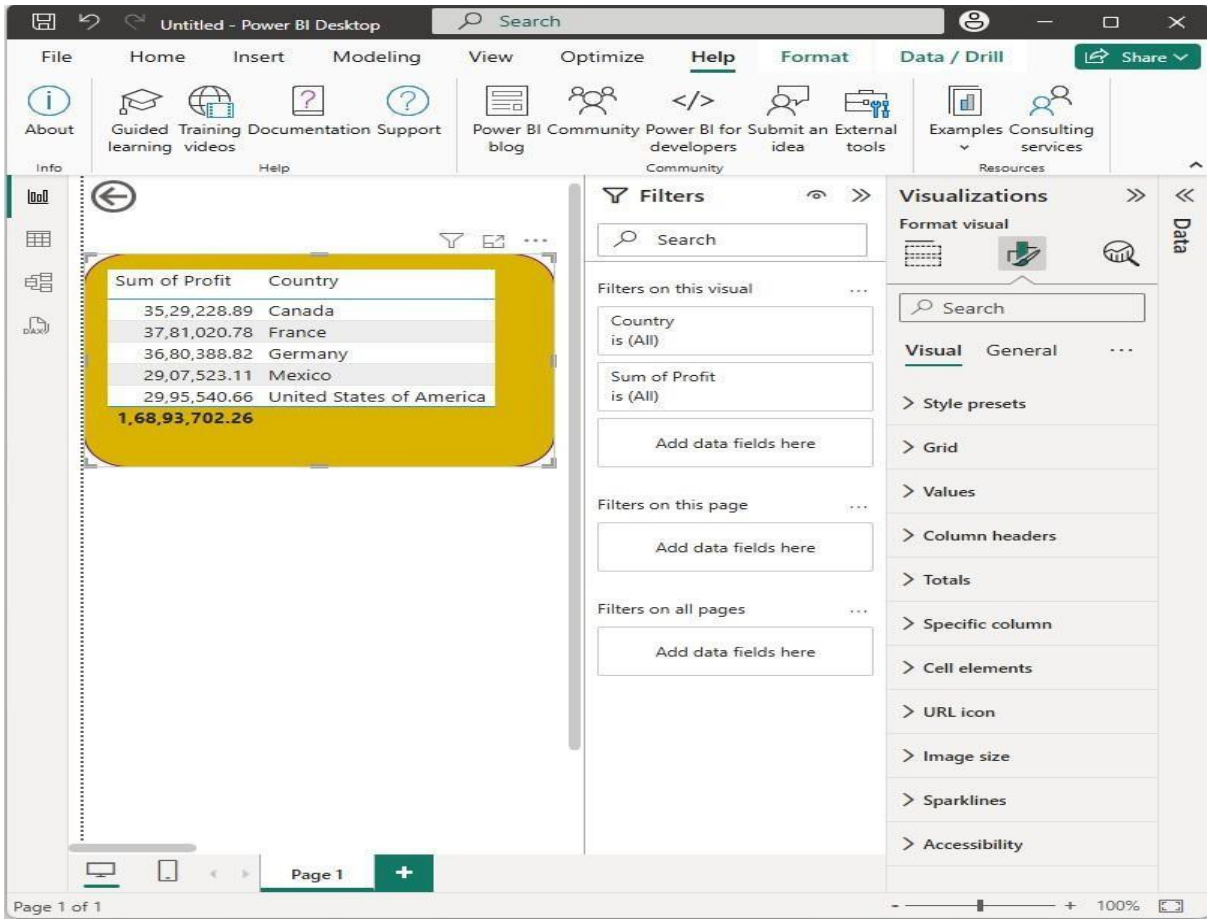

Industry-specific applications:

1. **Healthcare**:Analyze patient outcomes, disease trends, and healthcare resource utilization.
2. **Retail**:Analyzesales trends, customer behavior, and inventory management.
3. **Finance**:Analyzefinancial performance, risk management, and compliance.
4. **Manufacturing**: Analyze production efficiency, quality control, and supply chain optimization.

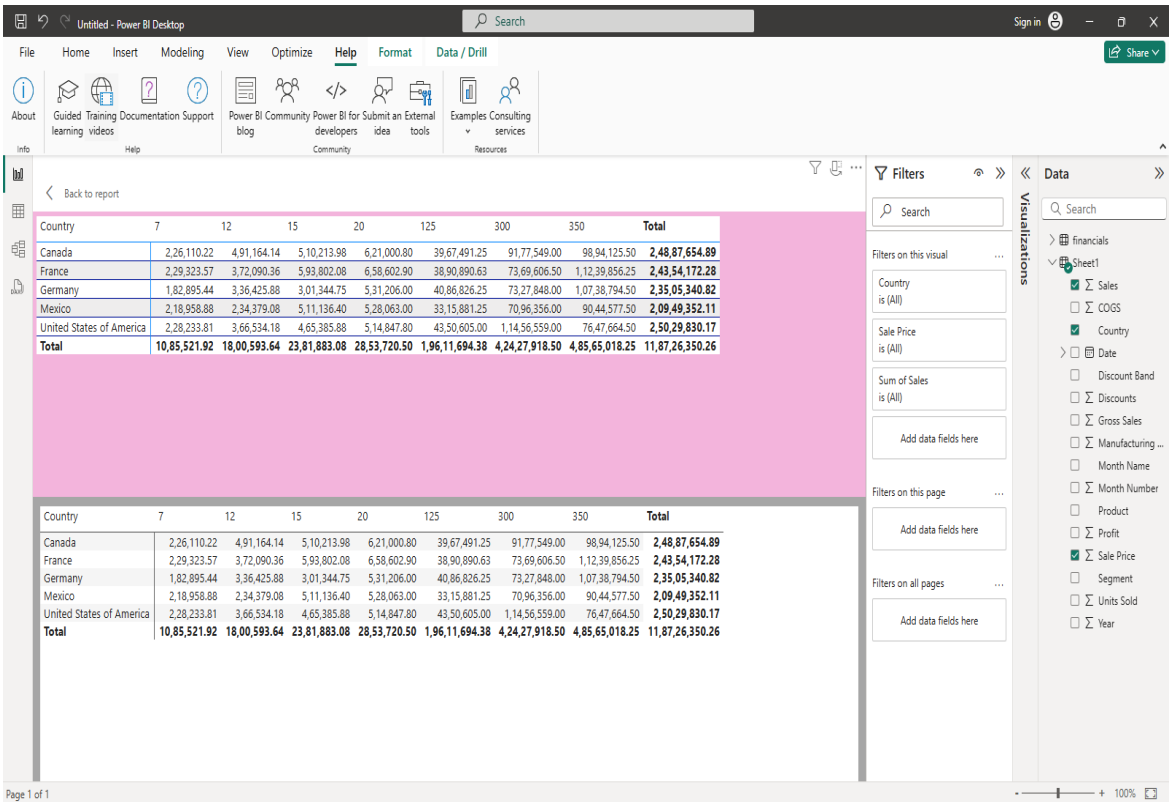

BASIC VISUALIZATIONS:

Tables: Display data in tabular format**.**
Matrices: Display data in matrix format, with rows and columns.
Charts: Display data ina graphical format, such a column, line, or pie charts.
Maps: Display geographic data on a map.

TABLE

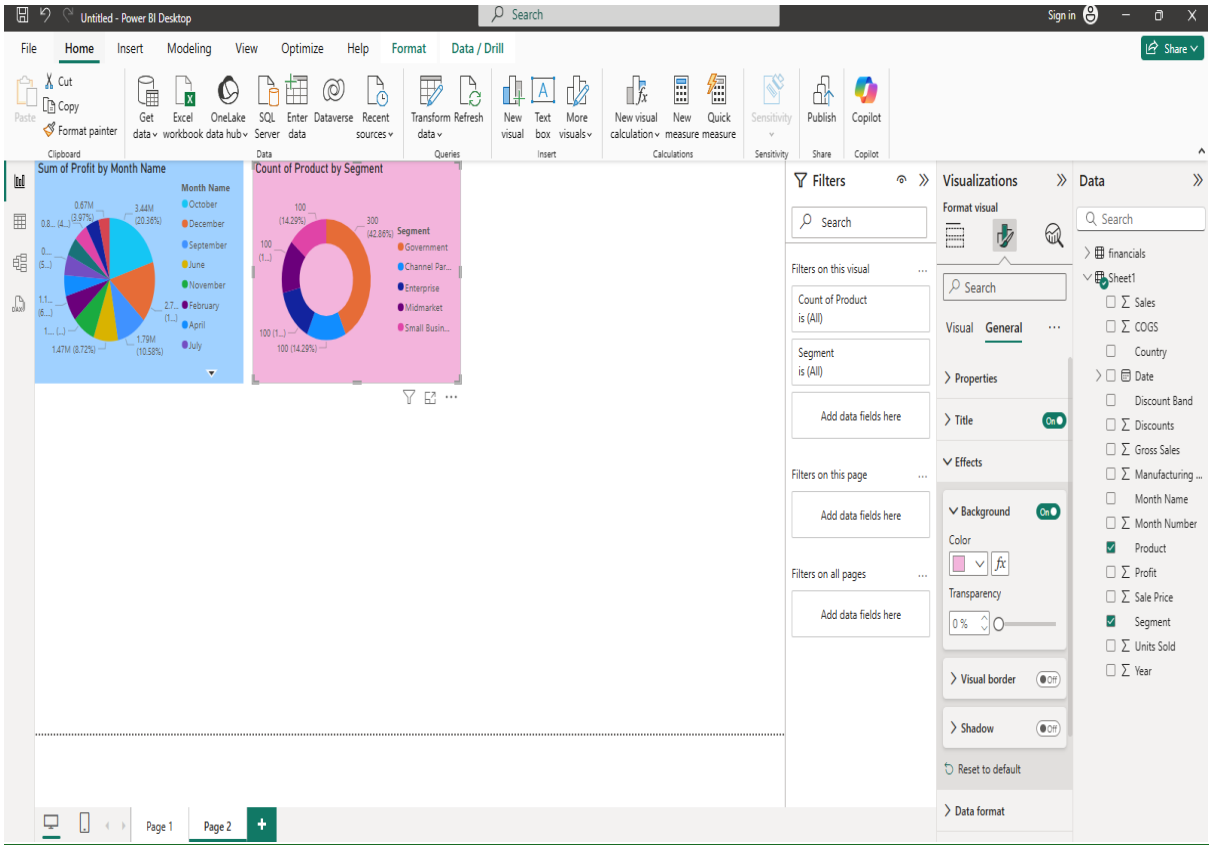

MATRIX TABLE

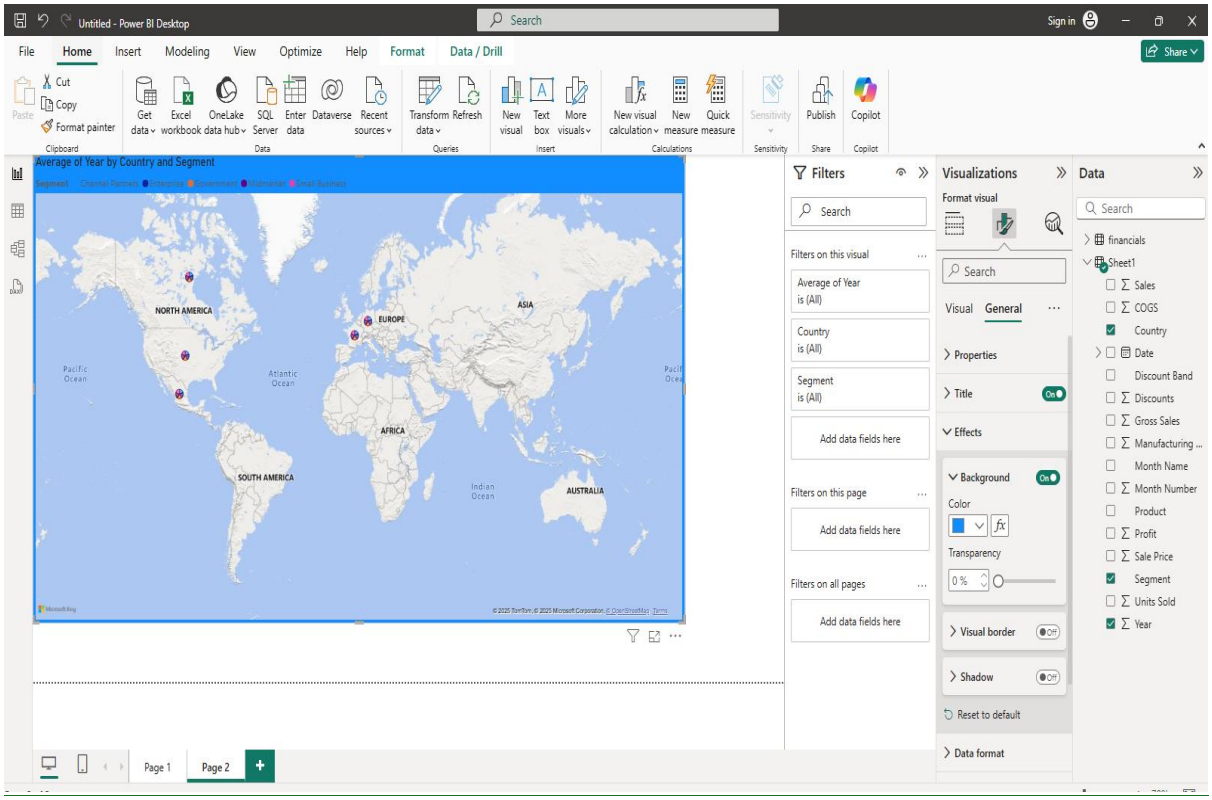

Country	7	12	15	20	125	300	350	Total

Advanced Visualizations

1. **Scatter Plots:** Display the relationship between two variables.
2. **Bar Charts:** Display categorical data with bars.
3. **Stacked Charts**: Display data with stacked bars or columns.
4. **Waterfall Charts:** Display data with a waterfall effect.
5. **Gauge Charts:** Display data with a gauge or dial.
6. **Treemaps:** Display hierarchical data in a Treemap format.
7. **Sunburst Charts:** Display hierarchical data in a sunburst format.

Interactive Visualizations.

1. **Slicers:** Allow users to filter data with interactive slicers.
2. **Drill-Down**: Allow users to drill down into detailed data.
3. **Tooltips:** Display additional information when users hover over data points.

Custom Visualizations

1. **R Visuals:** Create custom visuals using R programming language.
2. **Python Visuals**: Create custom visuals using Python programming language.
3. **D3.js Visuals**: Create custom visuals using D3.js library.

VISUALS IMAGES

Power BI Visuals report. By default, Power BI comes with 29 visuals.

WEEK 01:

Day 1: Foundations & Introduction
Day 2: Focus: Basics of Power BI, Installation, and Data Import.
Day 3: Environment Setup: Installed and configured Power BI Desktop.Understood the interface (Home, Insert, View tabs) and the workspace.
Day 4: Data Understanding: Learned how to connect to data sources (Excel) and the importance of data in BI.
Day 5: Import Methods Learned the difference between "Import" (loading data into the tool) and "Direct Query" (live connection).

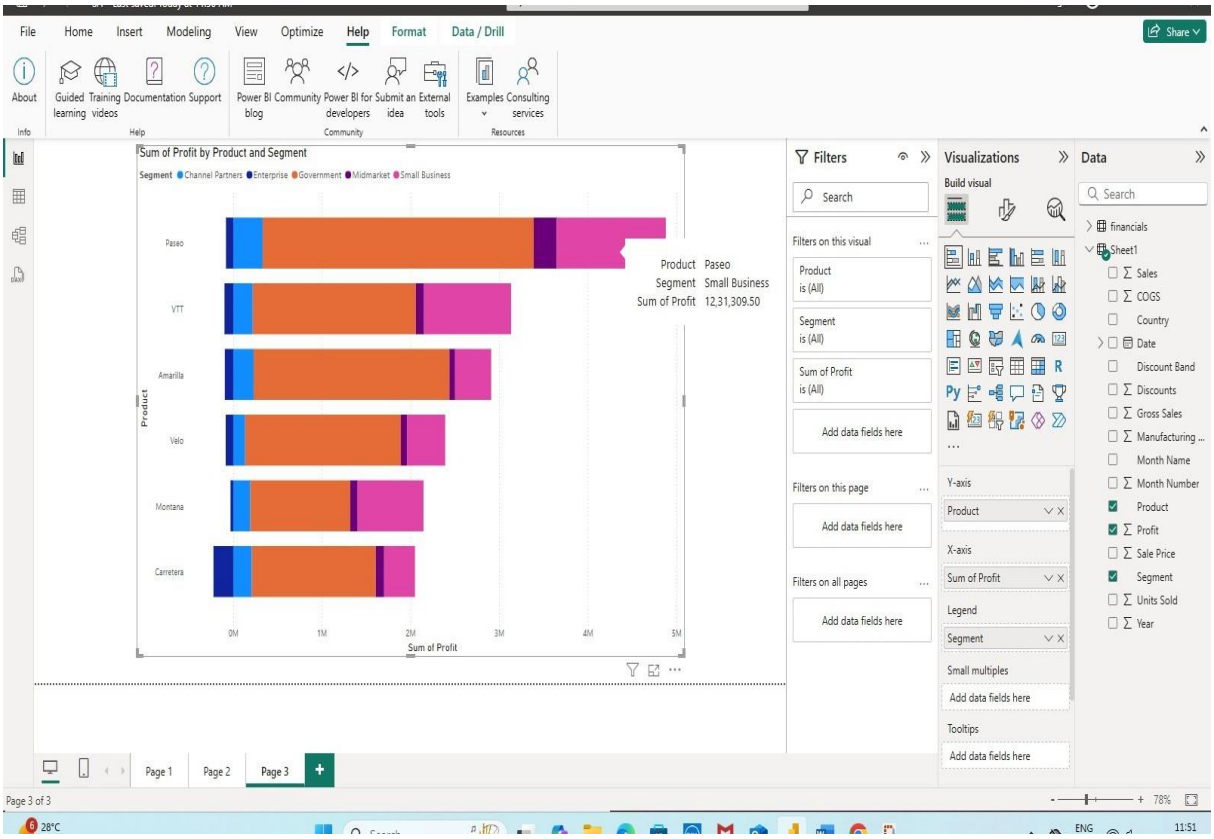

Example:

"I loaded an Excel file containing monthly sales data to create a dashboard.

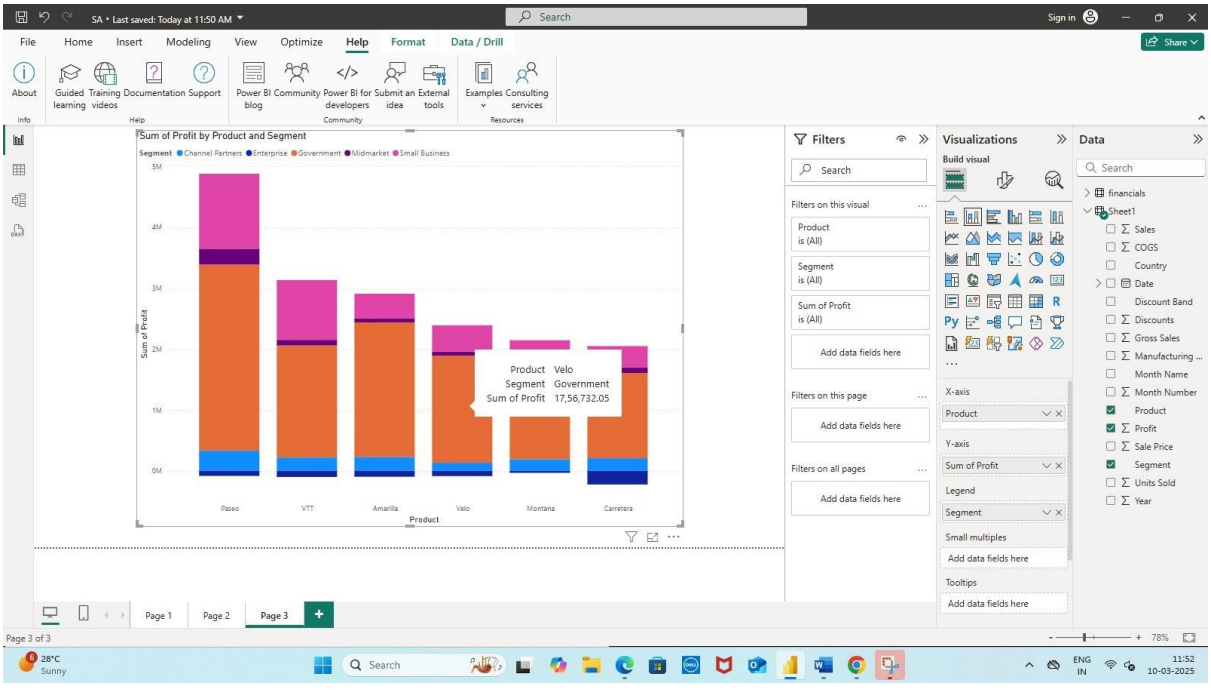

Weekly Conclusion:

I learned the basics of Power BI, including the interface and how to import raw data from Excel to start analyzing."

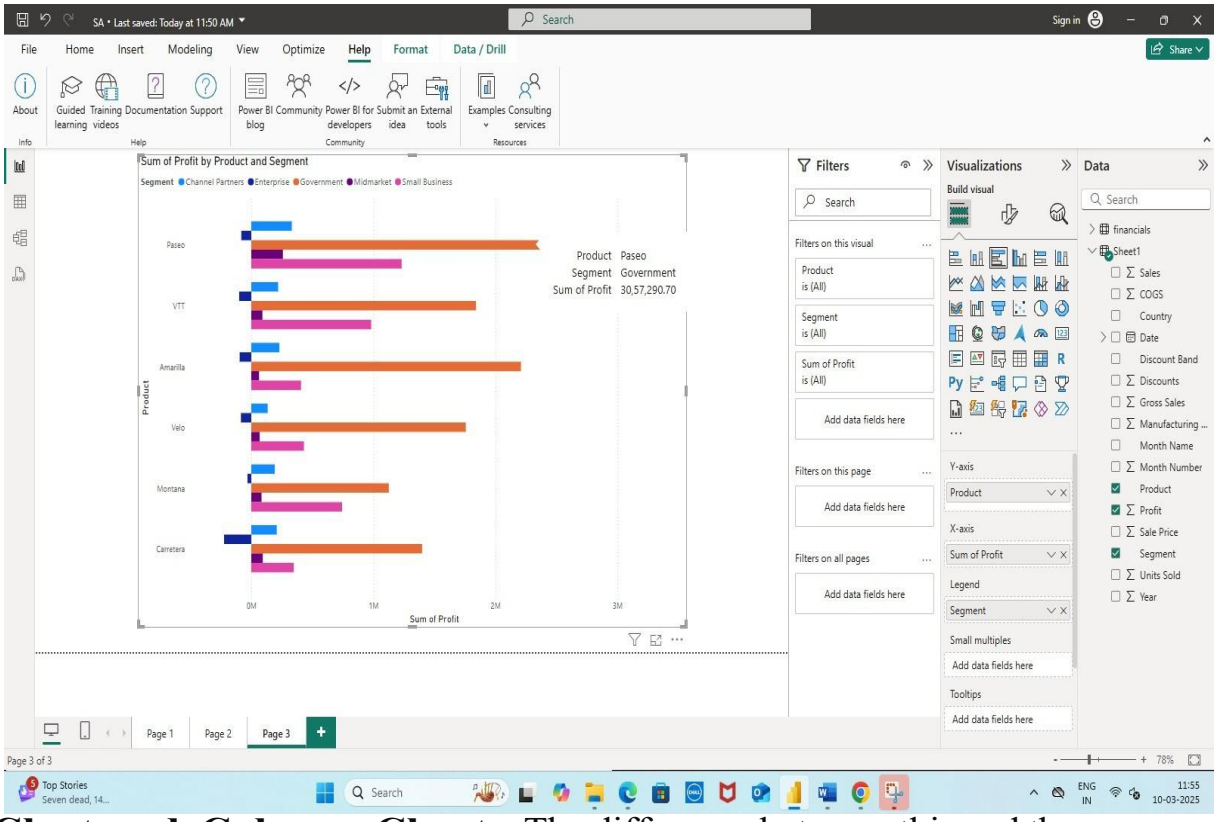

Stacked Bar Chart : This allows you to create a bar chart with the breakedown

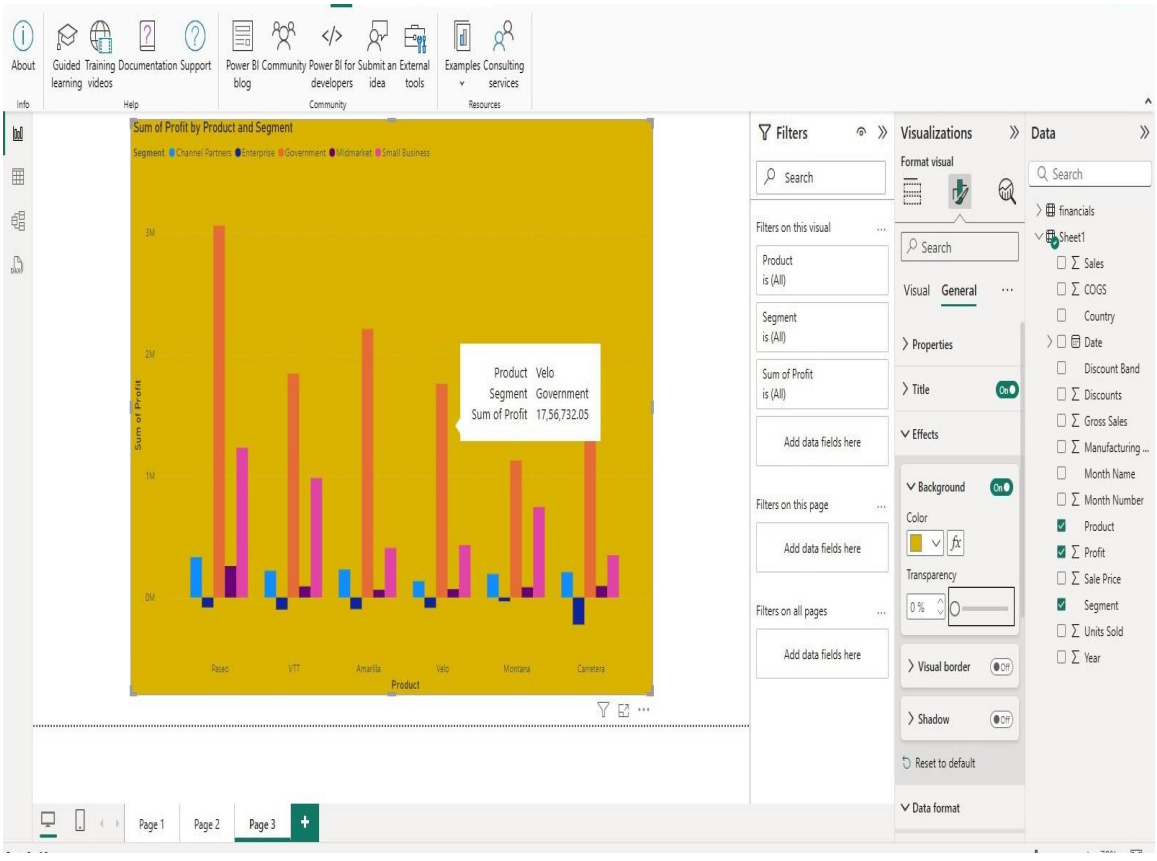

Stacked Column Chart: Technically same as the Stacke Bar Chart just the orientation is different, its bars are vertical.

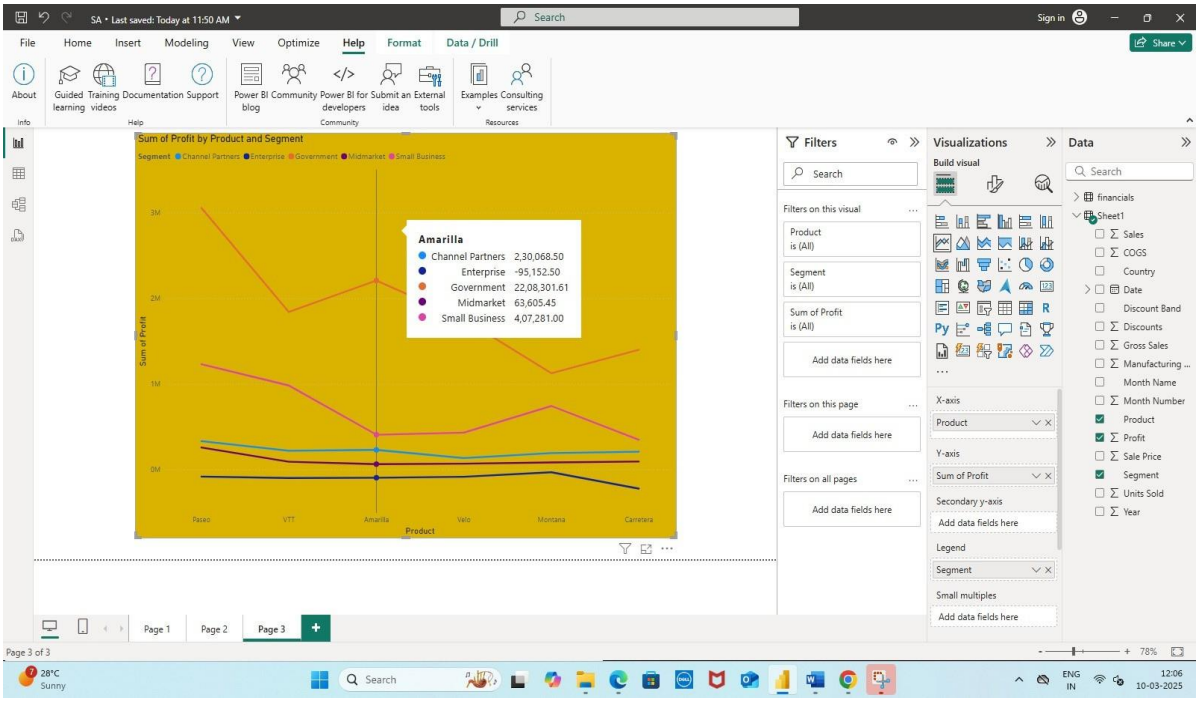

Clustered Bar Chart : The difference between this and the stacked one is that it has the breakdowns (legend values) plotted on independent bars rather than stacked one on another.

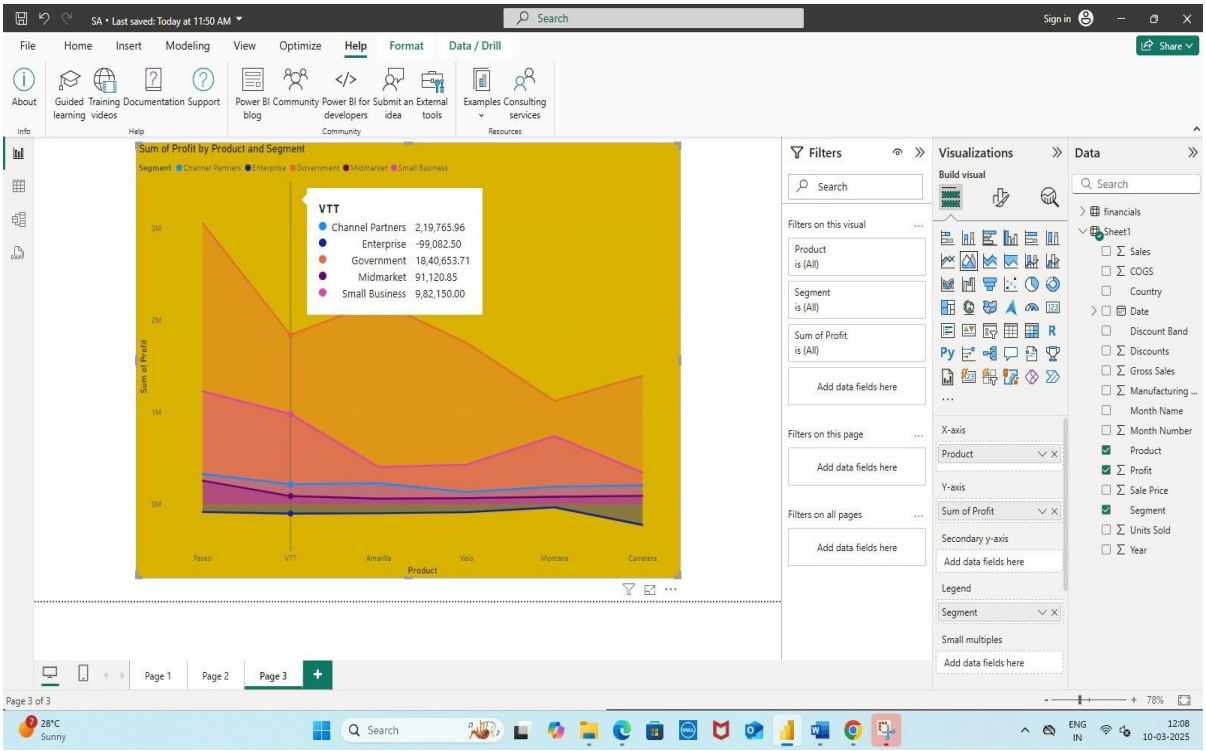

Clustered Column Chart : The difference between this and the stacked column chart is that it has the breakdowns (legend values) plotted on independent bars rather than stacked one on another.

Line Chart: Has all the components of the Bar/Column chart except the Color Saturation one. The line chart is to show trend (change over time), so you should always put a date or time field in the Axis.

AreaChart :It is very much like the line chart but with the area under the lines shaded. Has same components as the line chart.

WEEK 02:

Data Transformation & Visualization Basics Focus: Power Query Editor, Cleaning Data, and Basic Charts.

Points for Report:

Day 1&2 :Power Query Editor: Used this tool to clean data before analysis.
Day 3&4: Data Cleaning:Handled Missing Values (filled them or removed rows) and removed Duplicates to ensure data quality.

Day 5: Basic Visuals: Created simple charts: Bars (for comparison), Columns (similar to bars), and Pie Charts (for parts of a whole).

Example:

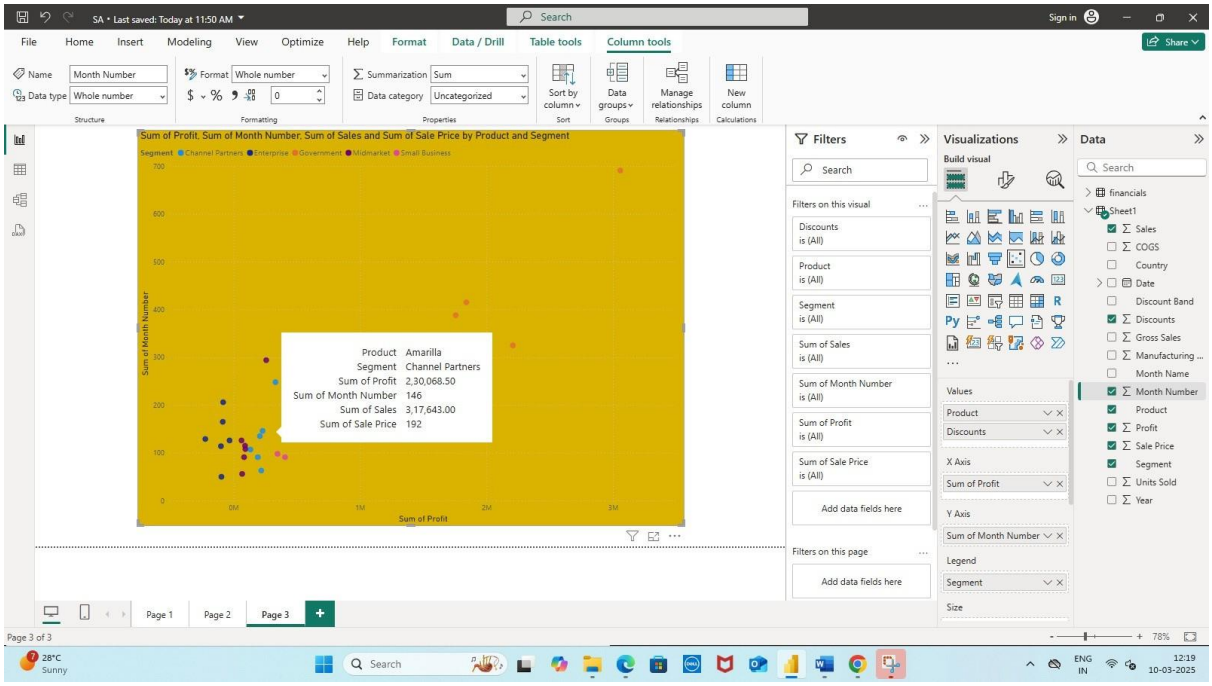

"I used Power Query to remove empty rows and merge tables so the data was ready for charts."

Conclusion

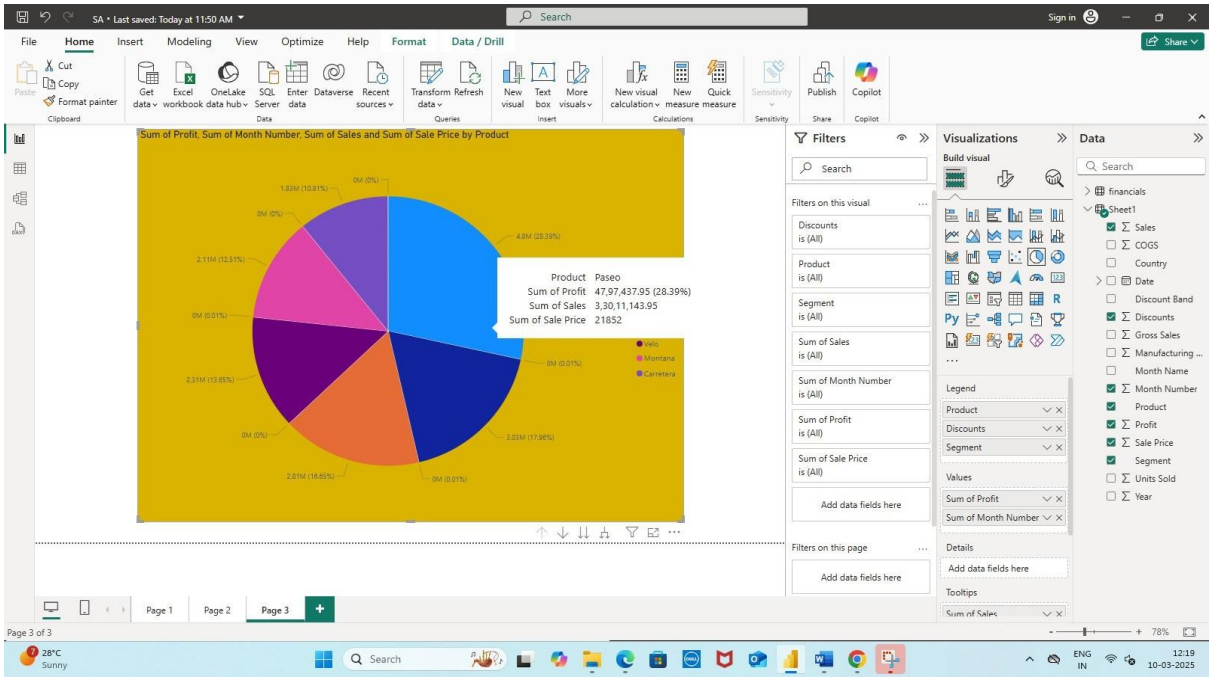

focused on data cleaning using Power Query and building basic charts like bars and

pies to visualize the data

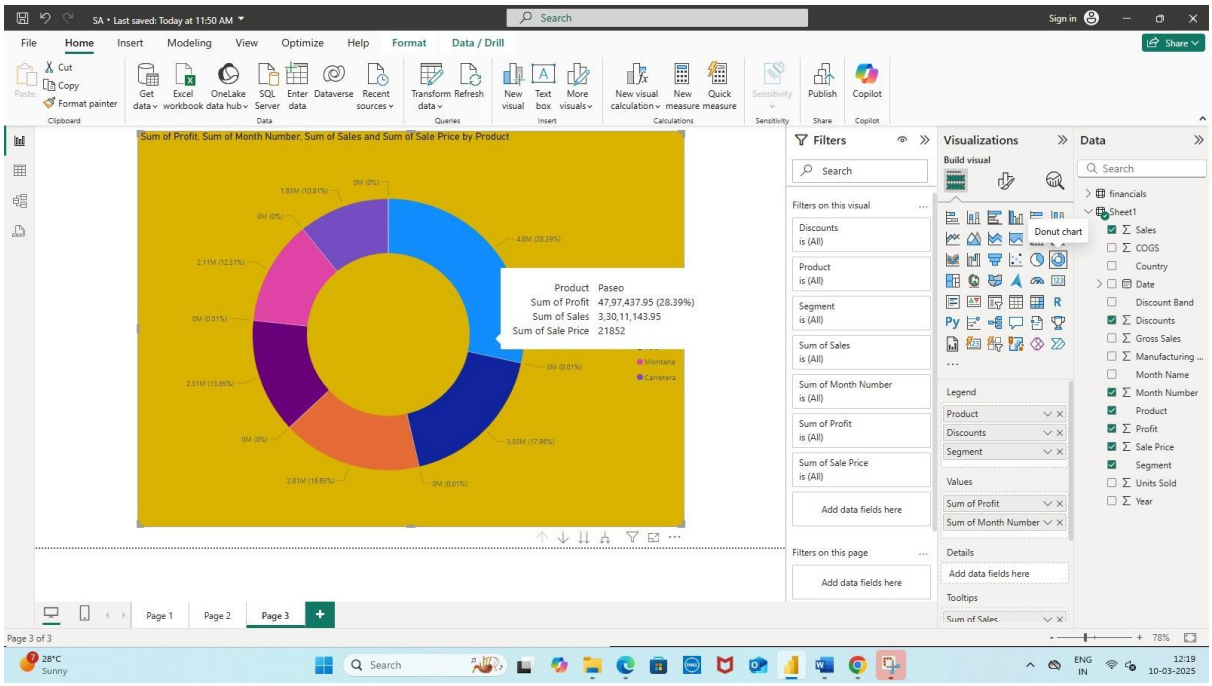

Scatter Chart: This chart is for showing the relationship between two variables. That is why it requires you put a field in X-axis and another in Y-axis. And it can also serve as bubble chart, you only need to drag the field to determine the bubble size into Size.

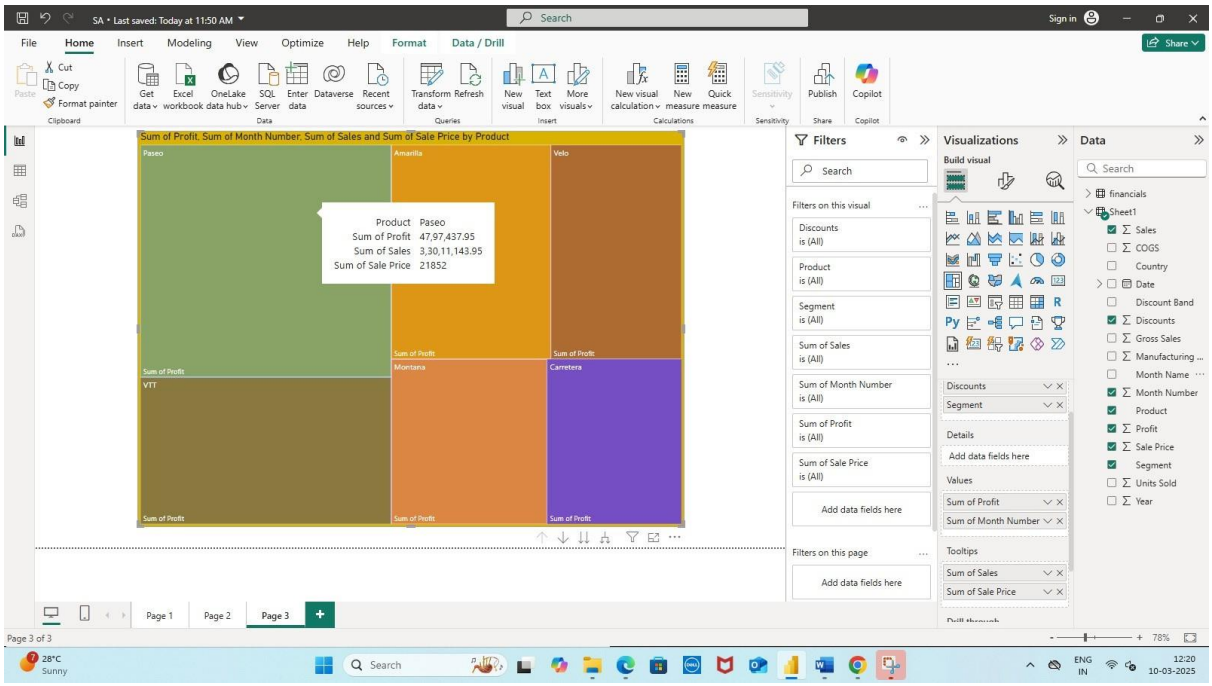

Pie Chart : This chart shows relative contribution of entries in the field put in the Legend to the field put in the Values. You can also put a field with additional useful information in the Details.

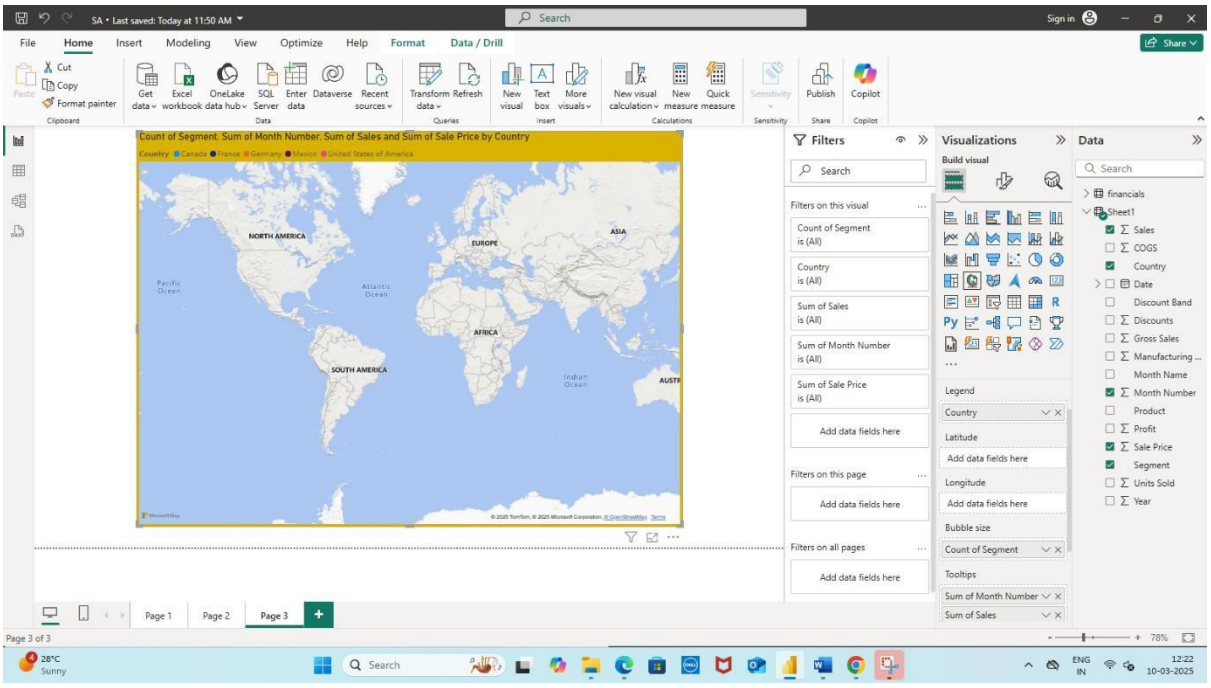

Donut Chart: It is exactly pie chart but with the traditional donut hole.

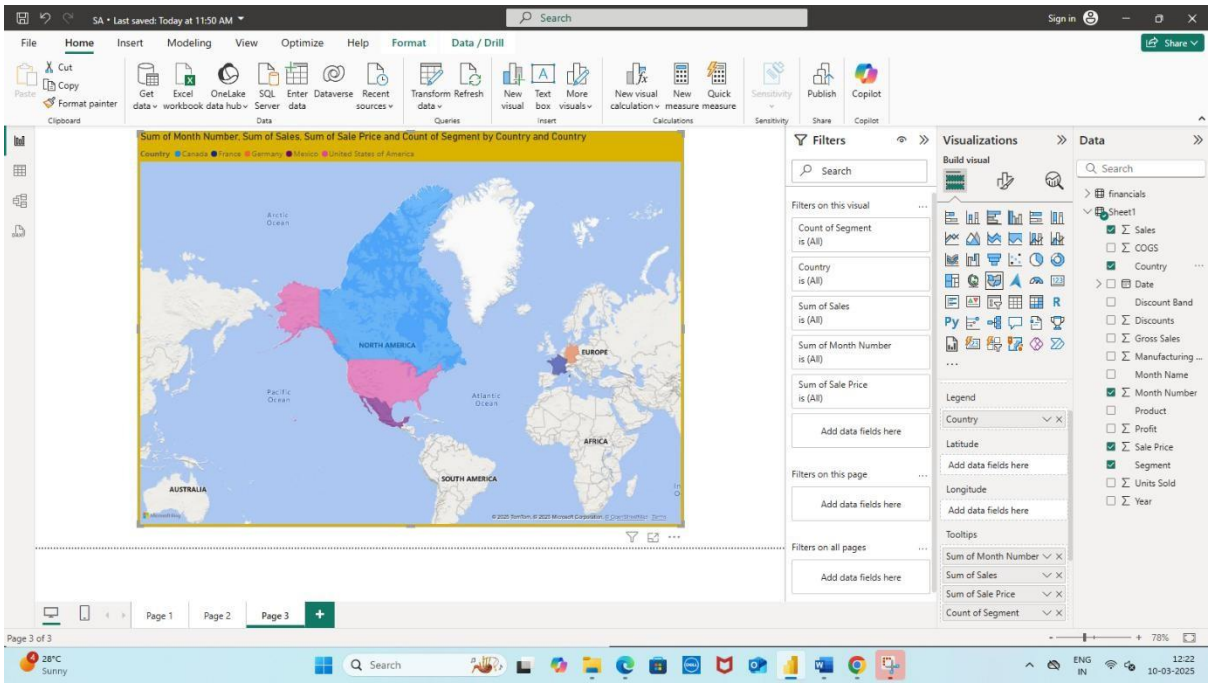

Treemap: This chart shows relative contribution but unlike pie chart that fits everything in a big circle this one fits everything in a resizable rectangle.

Map: The name is very self-explanatory. Normally, you would drag countries/cities or any location field to Location but if the locations are not very popular places you might need to get the GPS coordinates and place in the Latitude and Longitude.

FILLED MAP: It is like the Map but fills the entire location area on the map taking the shape of the country/state/city.

WEEK 03:

Day 1&2: Data Modeling & Relationships

Day 3&4: Star Schema, Tables, and Primary/Foreign Keys.

Day 4: Data Modeling Concepts: Learned to organize data into Fact Tables (numerical data like sales) and Dimension Tables (descriptive data like Customer Name).

Day 5:Star Schema: Implemented a Star Schema model where the fact table is in the center connected to dimension tables.

Keys: Understood Primary Keys (unique ID) and Foreign Keys (linking ID between tables).

Relationships: Created One-to-Many and Many-to-One relationships between tables.

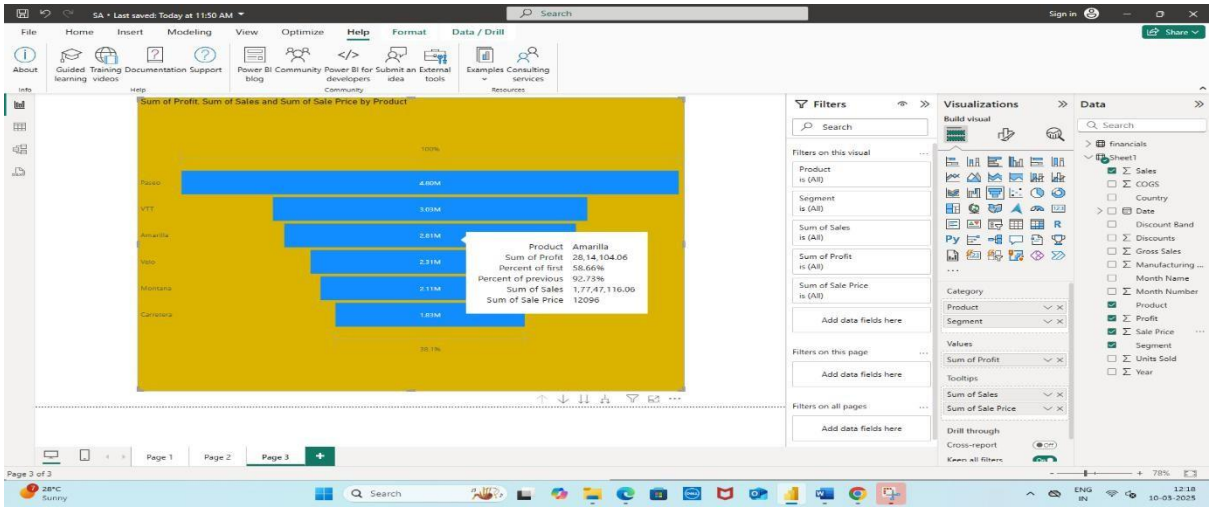

Example:

"I linked a 'Sales' table to a 'Date' table using a One-to-Many relationship to allow time-based analysis."

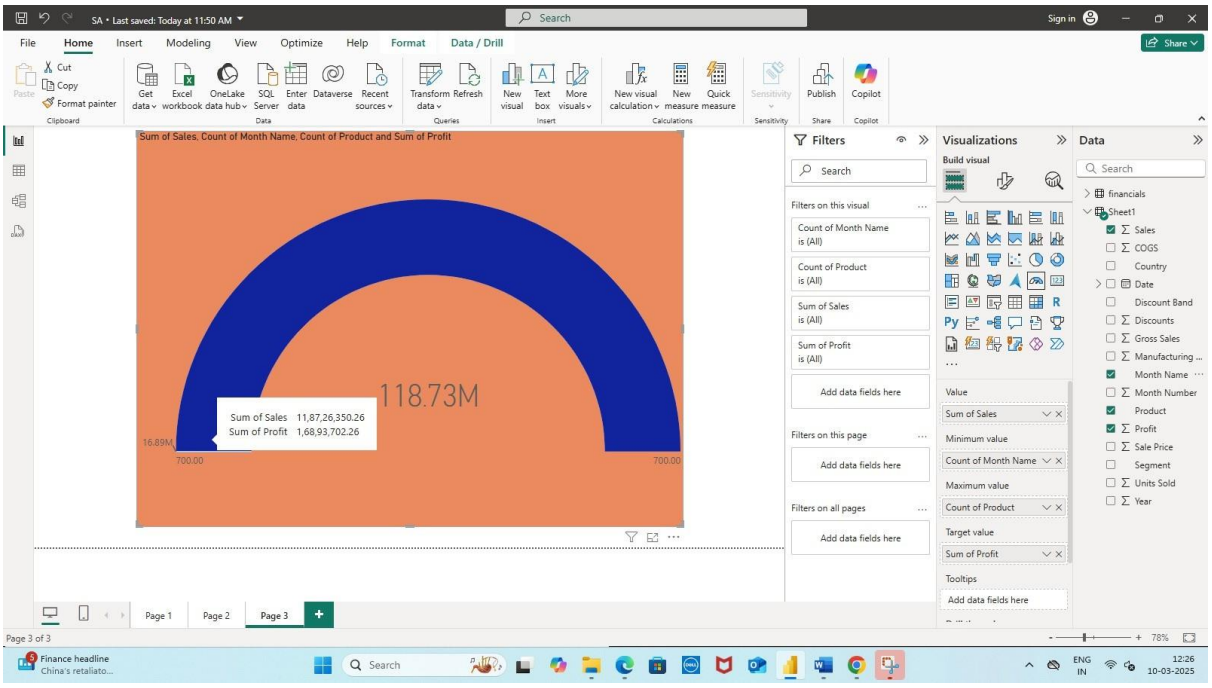

Conclusion :

I learned Data Modeling by creating Star Schemas and connecting Fact and Dimension tables using Primary and Foreign Keys."

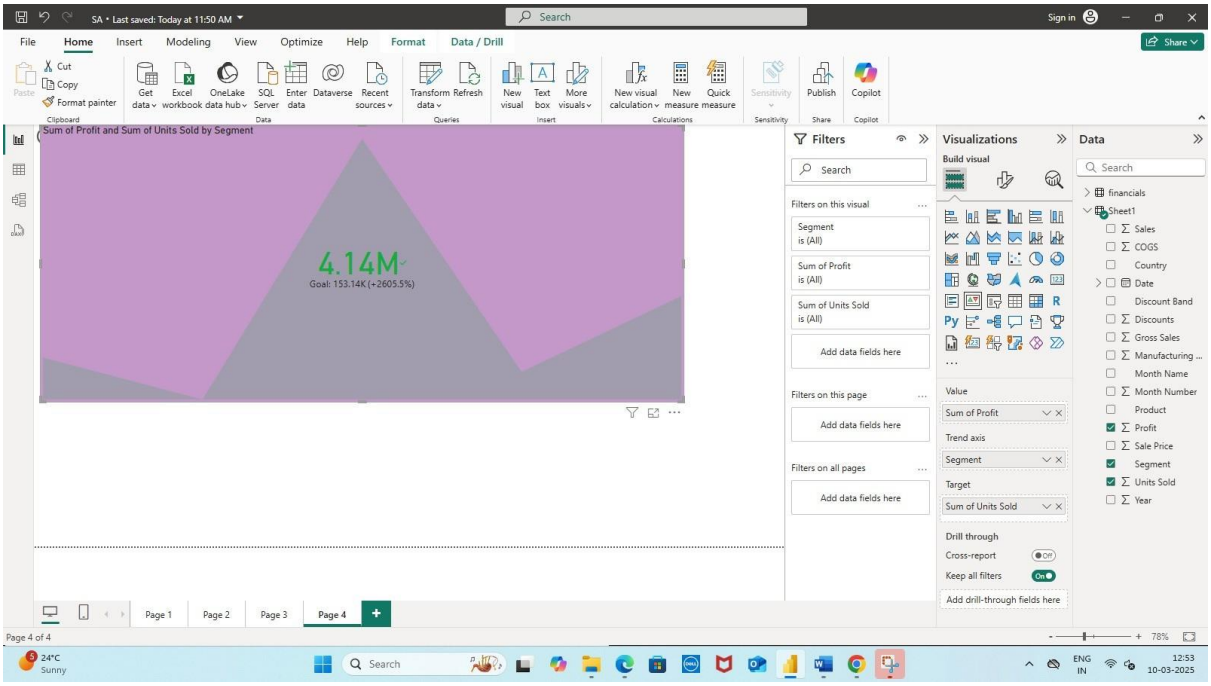

Funnel: This chart is best for stage-like fields and values. Popular for sales conversion records. You can put the sales/conversion stages in the Group.

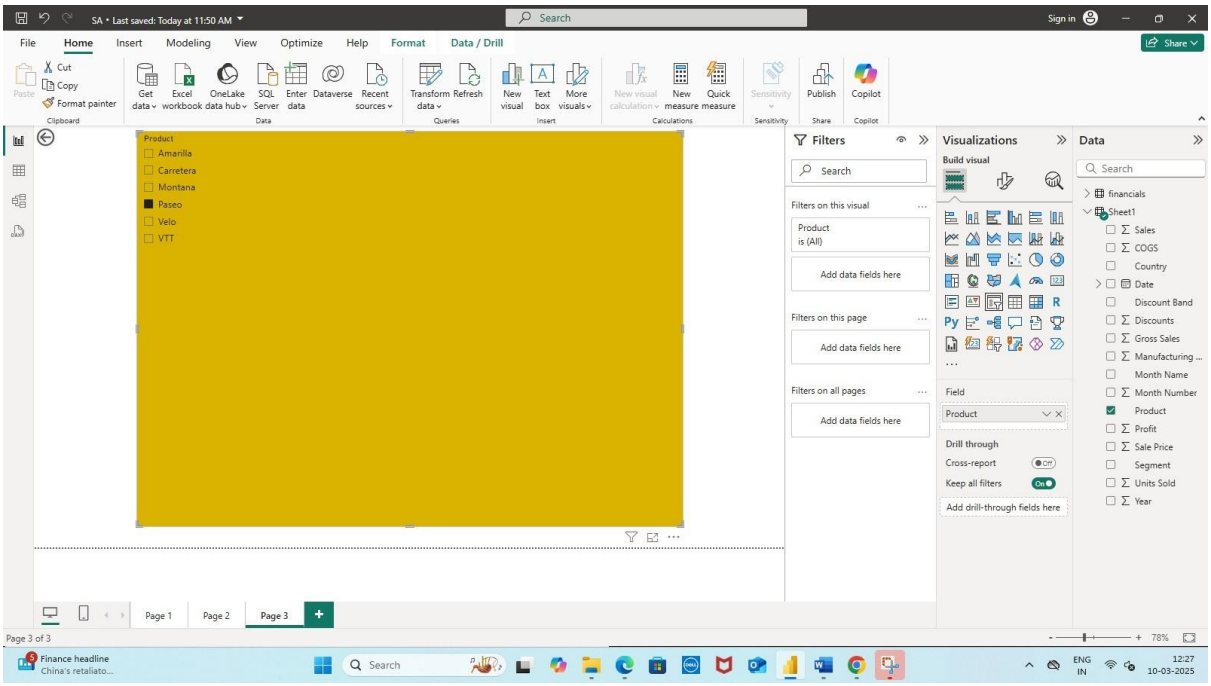

Gauge: This chart is great for showing the values against target on a gauge-like scale. And you can set the dimensions (minimum and maximum of the scale). It is one of the few visuals that allow you to set an alert on in the published Power BI dashboard

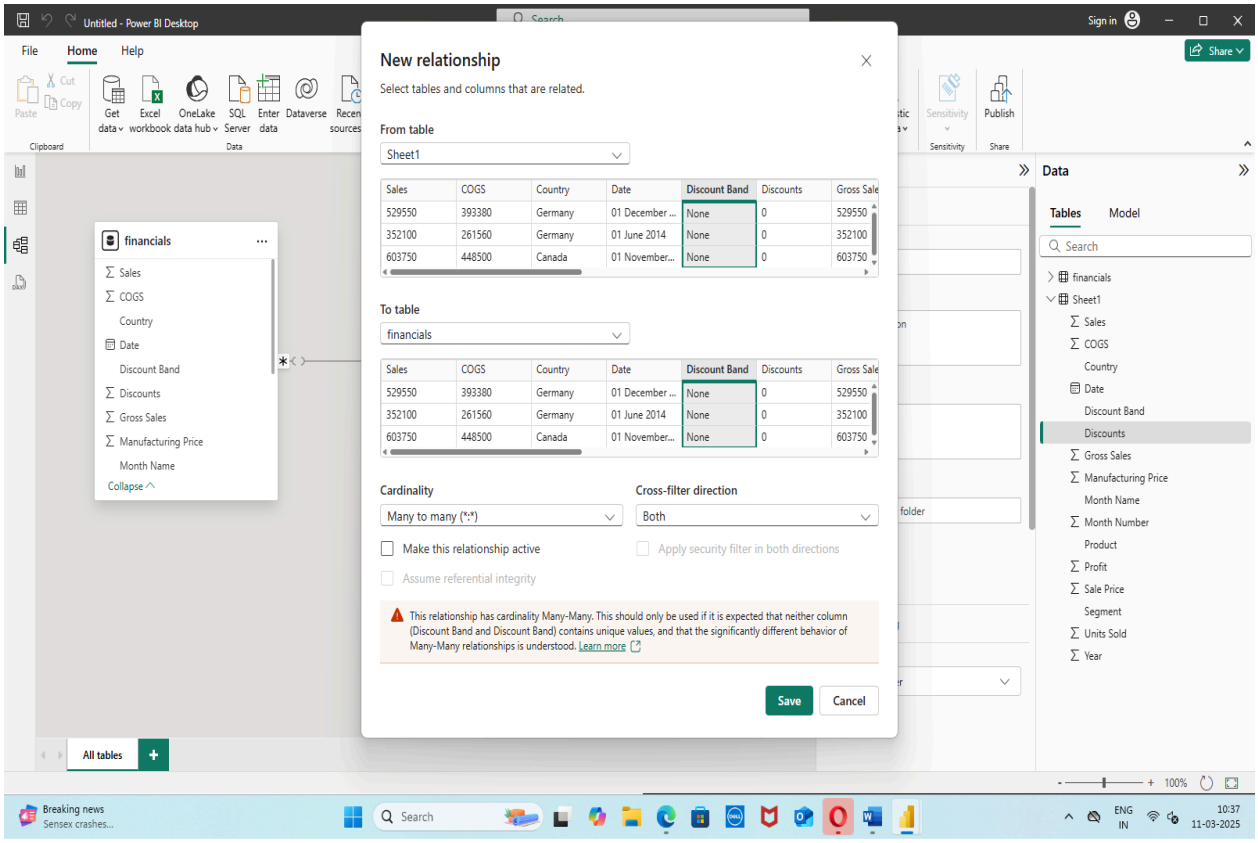

KPI: It shows the variance between a value and its set target. Very useful for key performance indicators (KPIs).

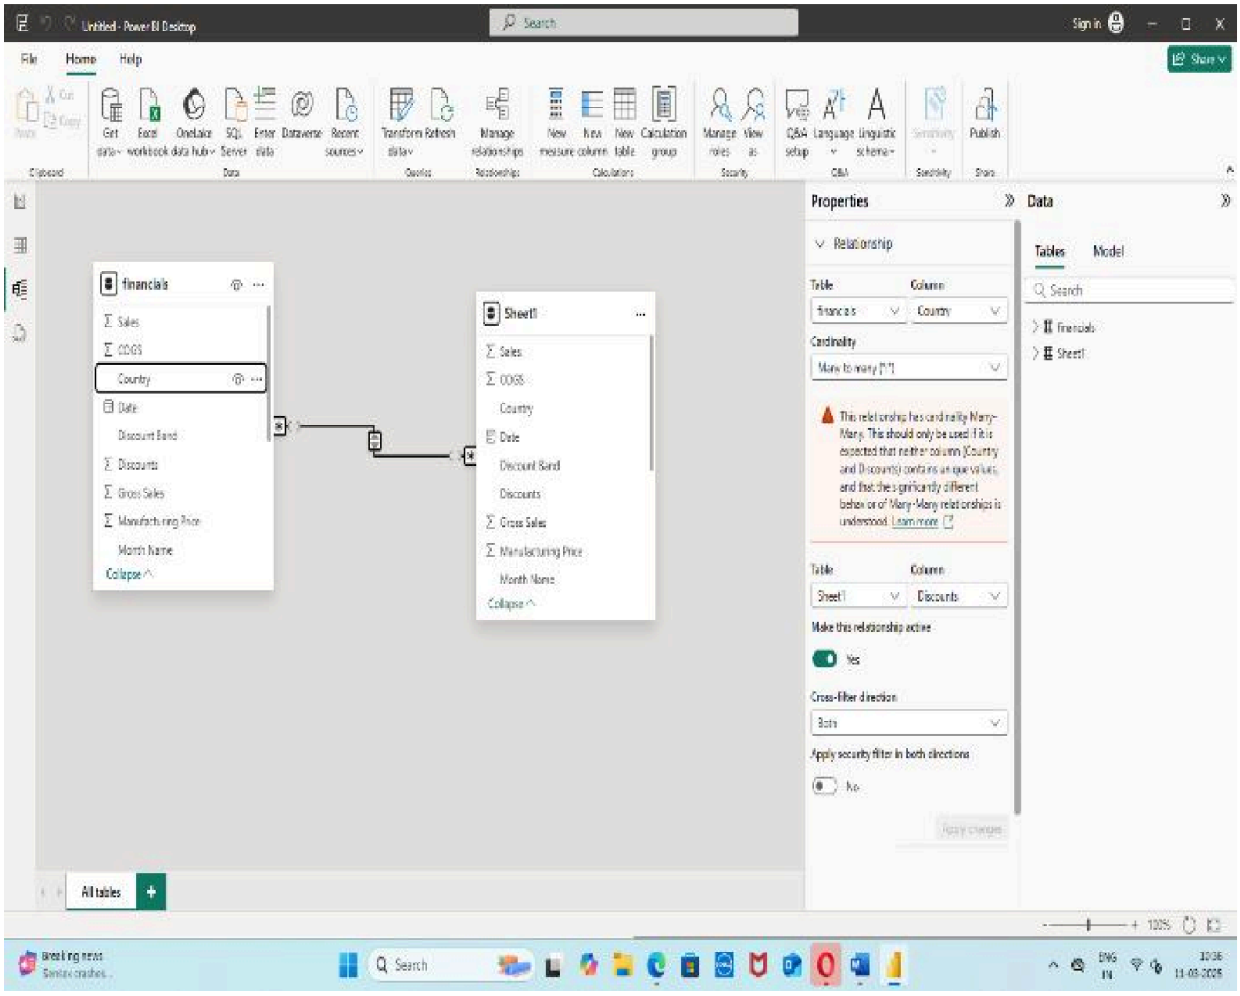

Slicers: I often call them nicer filters. Work exactly as a filter

Model View is a conceptual representation of a data model, showcasing the relationships between different data entities and attribute.

WEEK 04:

Day 1 :DAX (Data Analysis Expressions)

Focus: Calculated Columns, Measures, and Time Intelligence.

Day 2:

Calculated Columns vs. Measures:

Day 3: Learned when to use a Column (calculated row by row) vs. a Measure (dynamic calculation).

Day 4: Basic DAX Functions: Used SUM, COUNT, AVERAGE for calculations.

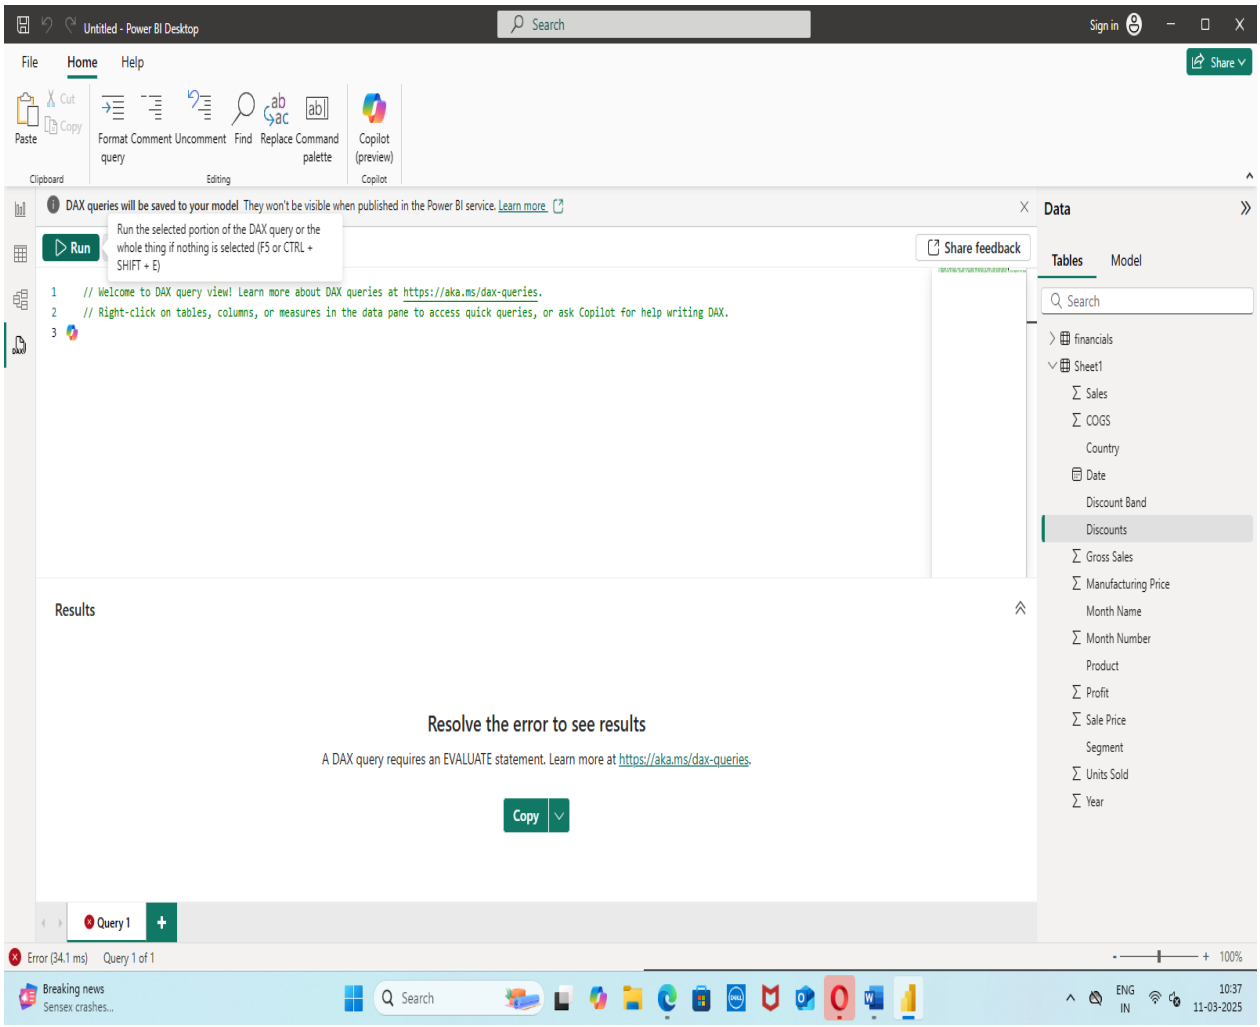

Day 5:String Functions: Used LEN (length), CONCATENATE (joining text), and MIN/MAX functions.

Time Intelligence: Calculated YTD (Year-to-Date) and MTD (Month-to-Date) values using specific DAX time functions.

Example : I wrote a DAX formula Sales = SUM(Price * Quantity) to calculate total revenue automatically.

Conclusion

I was about DAX, where I created measures using functions like SUM and AVERAGE, and calculated time-based metrics like YTD and MTD."

COMMON USE CASES FOR POWER BI

Sales and Marketing

- Sales Performance Analysis: Analyze sales trends, revenue growth, and sales team performance.
- Customer Segmentation: Segment customers based on demographics, behavior, and preferences.
- Marketing Campaign Analysis: Analyze the effectiveness of marketing campaigns, including ROI and customer engagement.

Finance and Accounting

- Financial Reporting: Create financial reports, including income statements, balance sheets, and cash flow statements.
- Budgeting and Forecasting: Create budgets and forecasts, and track actuals against them.
- Accounts Receivable and Payable Analysis: Analyze accounts receivable and payable, including aging and payment trends.

Operations and Supply Chain

- Inventory Management: Analyze inventory levels, including stock levels, reorder points, and lead times.
- Supply Chain Optimization: Optimize supply chain operations, including demand forecasting, inventory management, and logistics planning.
- Equipment Maintenance and Quality Control: Analyze equipment maintenance and quality control data, including downtime, maintenance schedules, and defect rates.

Human Resources

- Employee Performance Analysis: Analyze employee performance, including metrics such as sales performance, customer satisfaction, and productivity.
- Recruitment and Hiring Analysis: Analyze recruitment and hiring data, including metrics such as time-to-hire, source of hire, and candidate satisfaction.
- Training and Development Analysis: Analyze training and development data, including metrics such as training completion rates, assessment scores, and skill gaps.

Healthcare

- Patient Outcomes Analysis: Analyze patient outcomes, including metrics such as readmission rates, complication rates, and patient satisfaction.
- Disease Trends Analysis: Analyze disease trends, including metrics such as incidence rates, prevalence rates, and mortality rates.
- Resource Utilization Analysis: Analyze resource utilization, including metrics such as bed occupancy rates, operating room utilization, and staff productivity.

Education

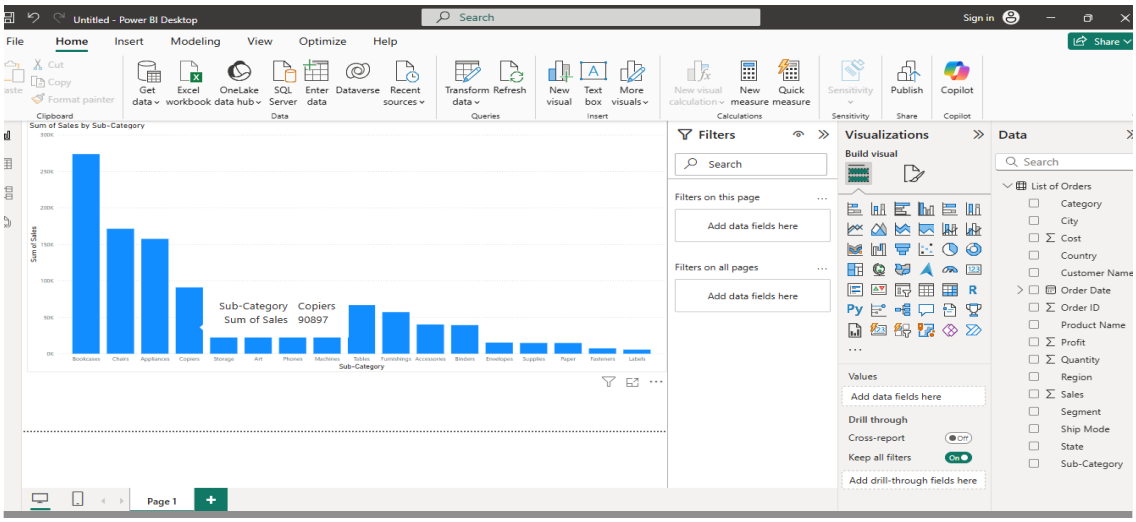

- Student Performance Analysis: Analyze student performance, including metrics such as grades, attendance rates, and graduation rates.

- Teacher Effectiveness Analysis: Analyze teacher effectiveness, including metrics such as student growth, teacher evaluation scores, and teacher retention rates.
- Resource Allocation Analysis: Analyze resource allocation, including metrics such as budget allocation, staffing levels, and facility utilization.

These are just a few examples of the many use cases for Power BI. The platform can be applied to various industries and domains, helping organizations to make data-driven decisions and drive business success.

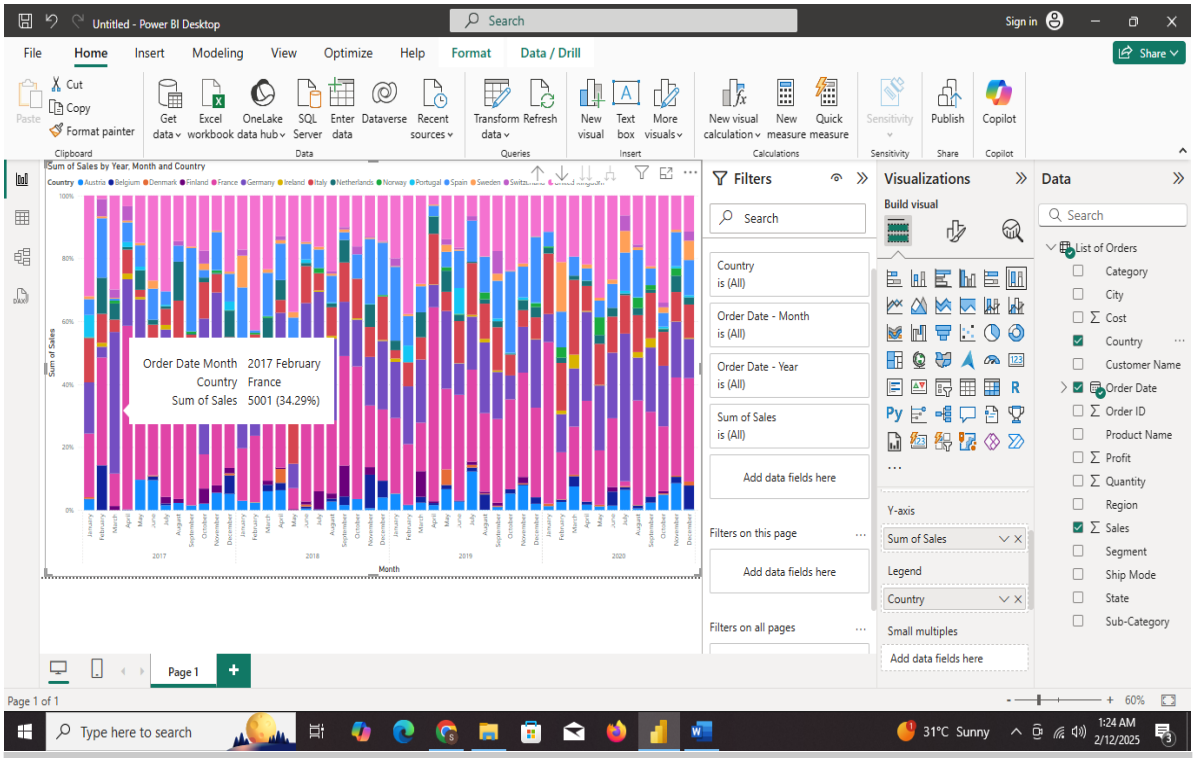

ASSIGNMENT 1

1. Total Sales from Copiers (Sub-Category)?

- Sub category copiers is “sum of sales 90897”

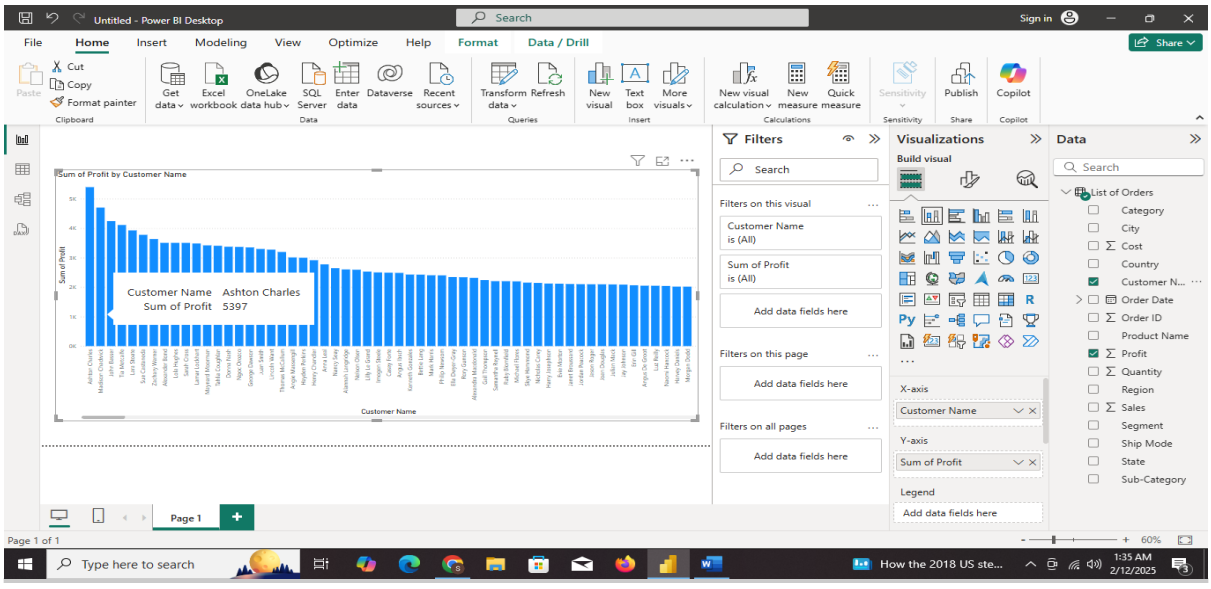

2. Total Sales from France in February 2017?

Order month 2017 February country France

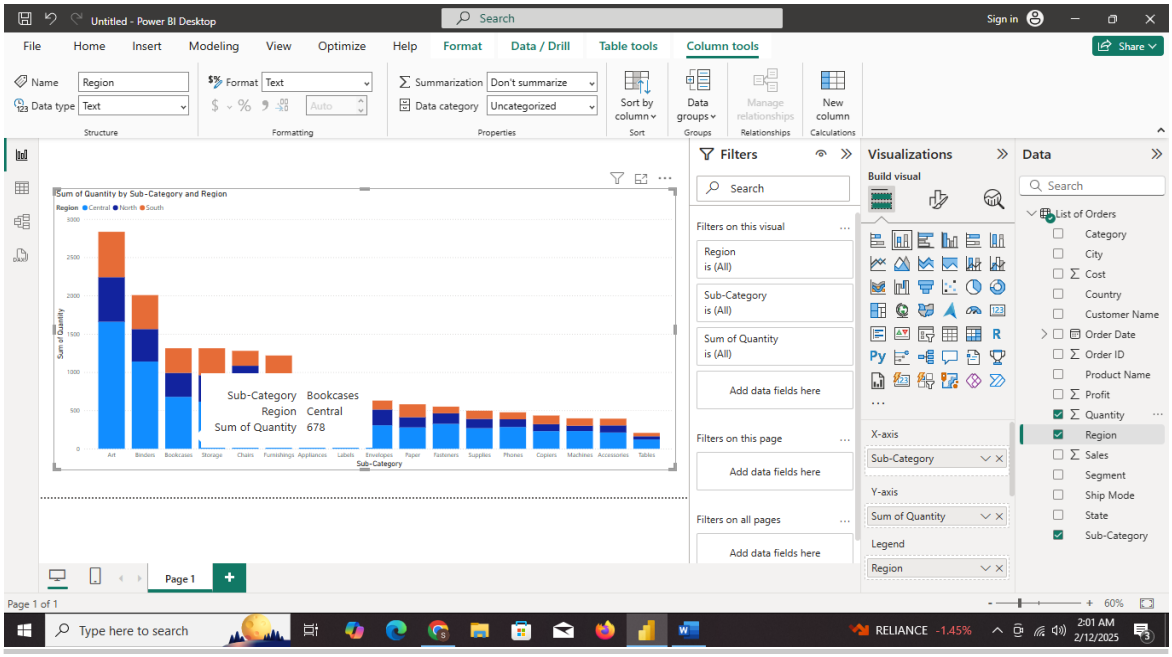

“ Sum of Sales 5001(34.29%)”

3. Who is our most profitable customer?

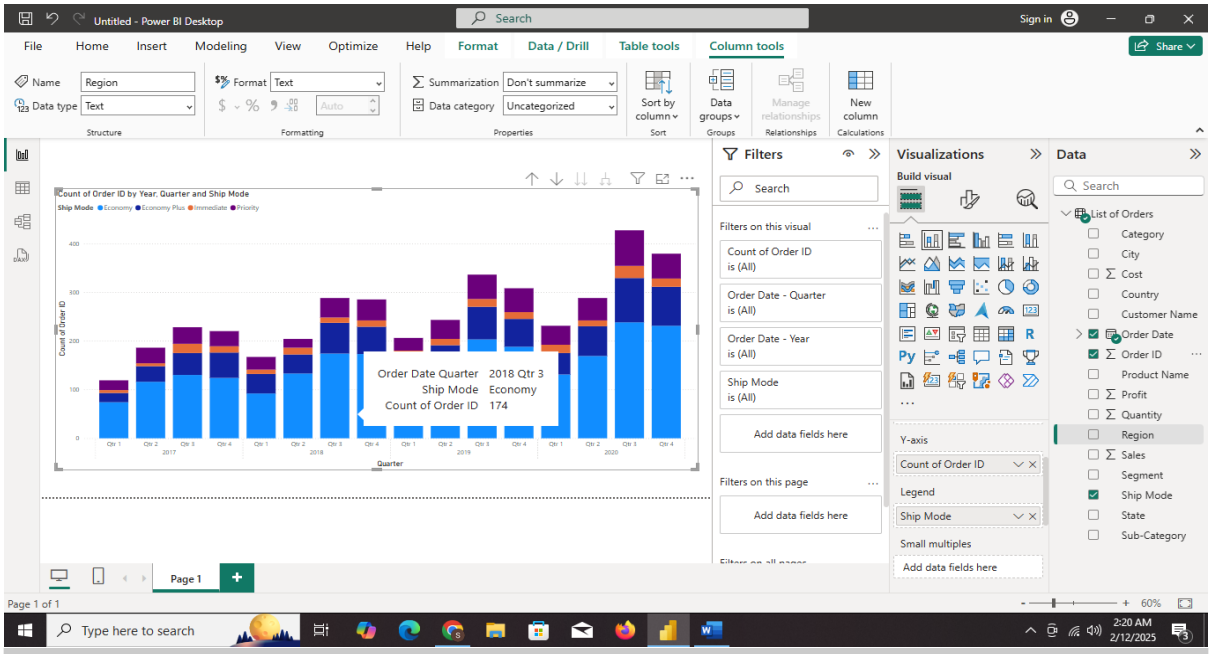

Customer name is Ashton Charles “ Sum of profit 5397”

4. quantity of bookcases sold in the Total Central region?

Sub category Books cases of region central“Sum of Quantity 678”

5. Which shipping mode brought the most orders in Q3,2018?

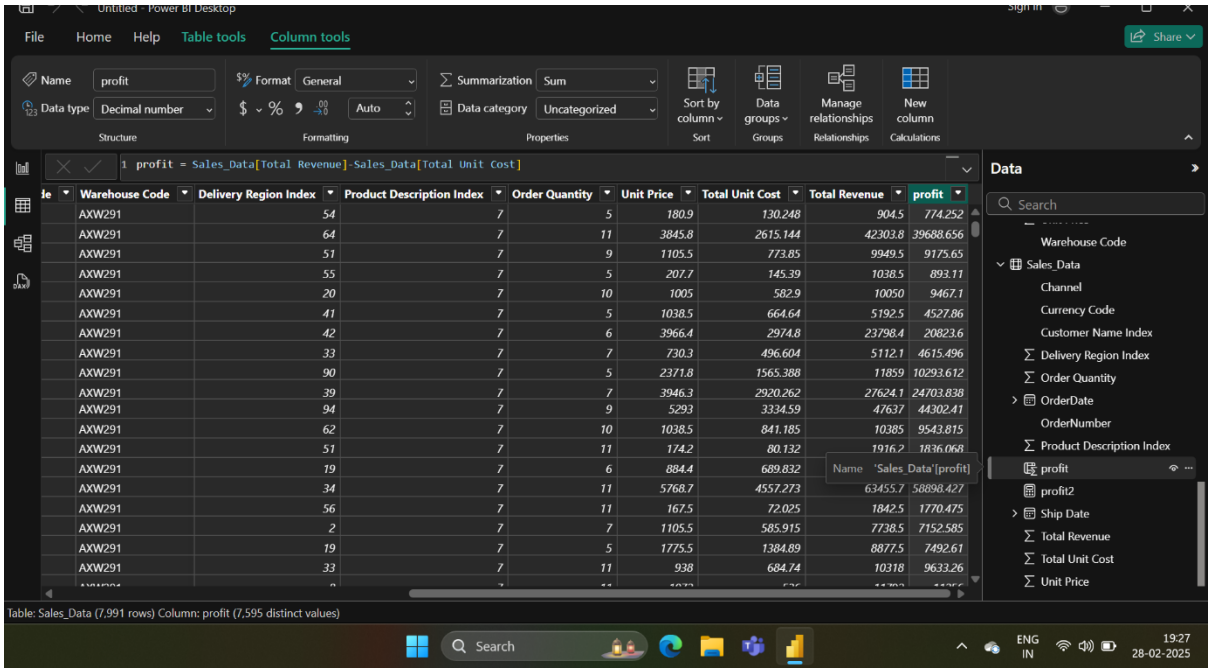

Order data quarter 2018 qtr 3 ship mode Economy “Count of Order ID 174”

ASSIGNMENT 2

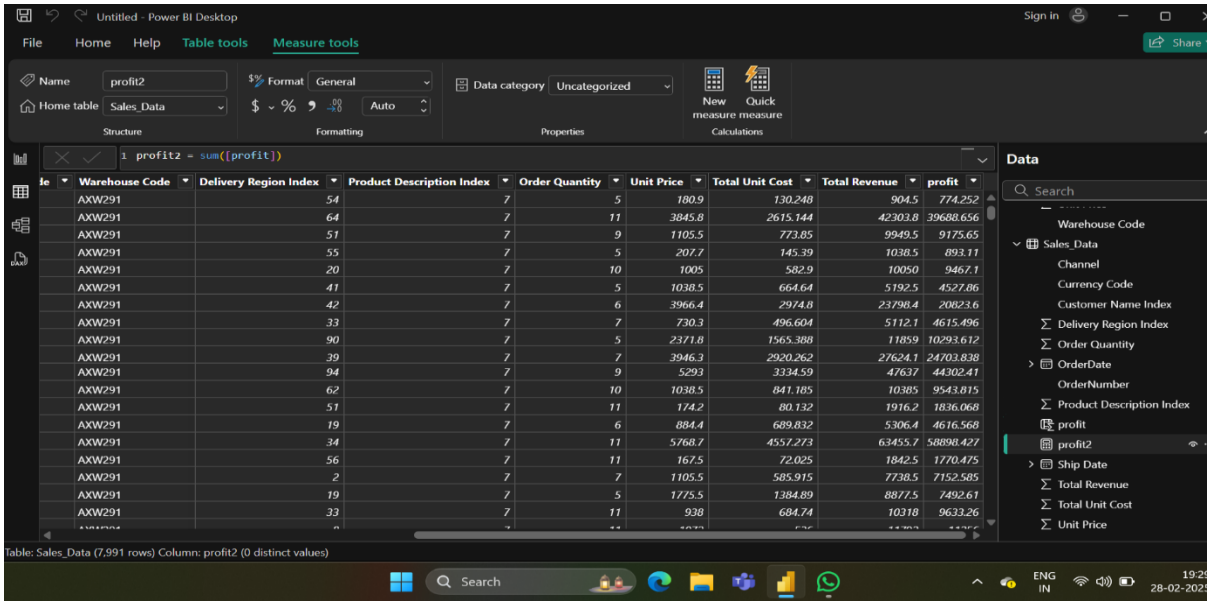

Using POWER BI TESTING DATA .xlsx data set, do the following formulas using New column and new measure in the table view and share the screenshot below.

- Cost=Total unit cost*order quantity
- Profit=Total revenue-cost in new column
- Profit2=sum([profit]) in new measure

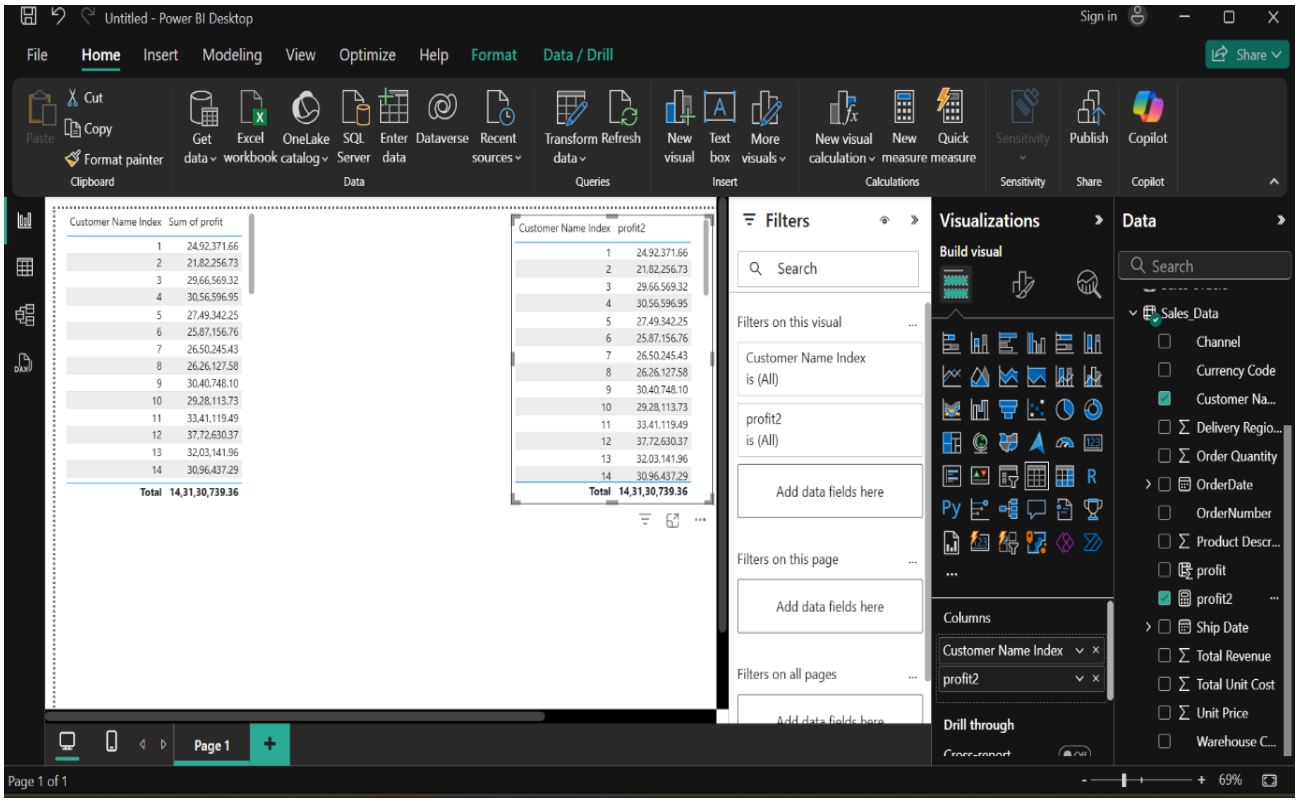

1.Profit

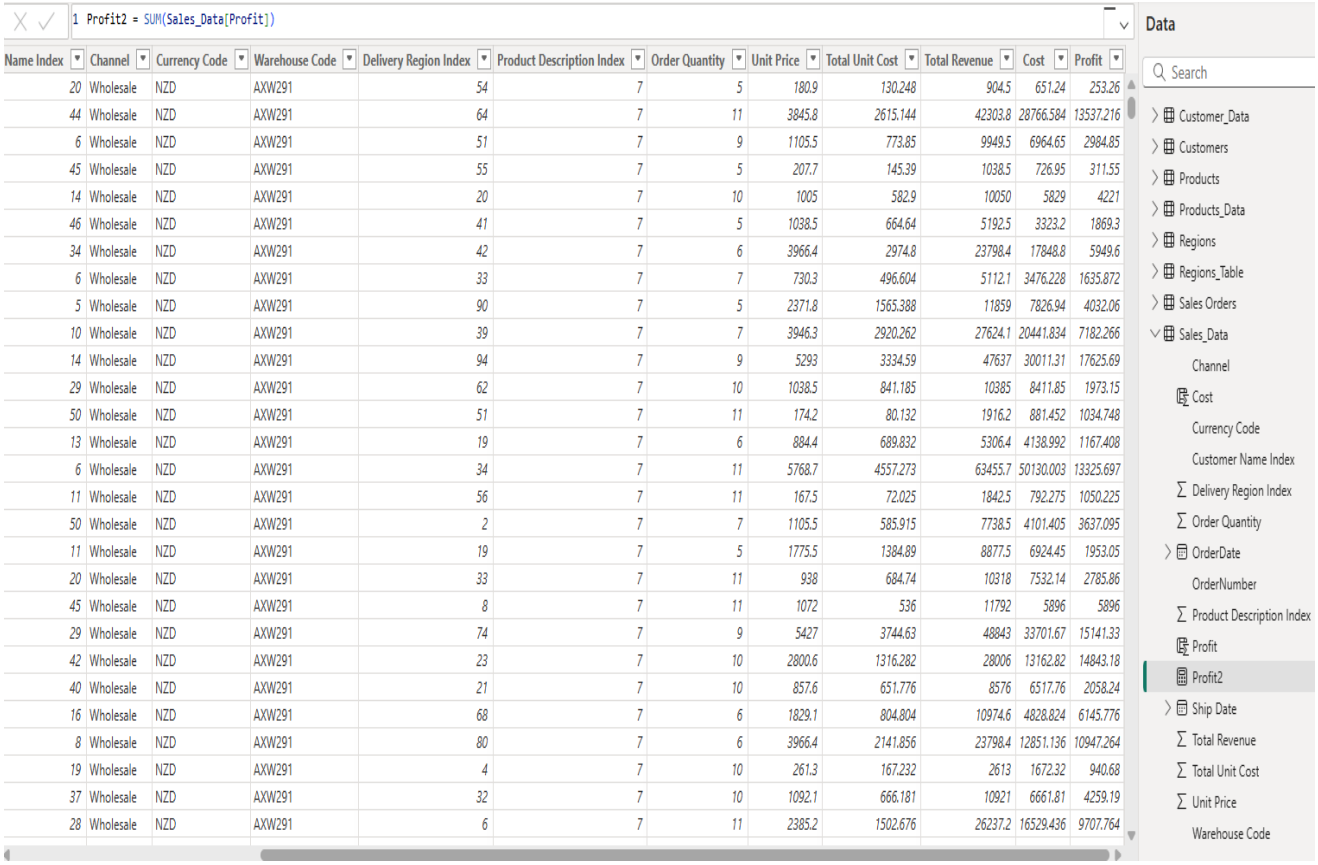

2. Profit2

3. TABLE

4. Full dash board

LEARNING OUTCOME

Positive outcomes

1. Enhanced data-driven decision-making skills
2. Improved ability to create interactive and dynamic reports
3. Proficiency in data modeling, analysis, and visualization
4. Ability to connect to various data sources and transform data
5. Effective use of DAX formulas for calculations and measures
6. Creation of stunning visualizations and dashboards
7. Ability to identify trends, patterns, and insights from data
8. Improved communication of complex data insights to stakeholders
9. Ability to refresh and update reports automatically
10. Enhanced problem-solving skills using data analysis and visualization

Negative outcomes

1. Data misinterpretation
2. Poor visualization design
3. Inaccurate insights
4. Lack of data validation
5. Insufficient context
6. Biased reporting
7. Overcomplicating analysis

WEEK 5

Day 01 Listening Skills: Learned the importance of paying attention and maintaining proper body language.

Day 02 Leadership Presence: Focused on verbal impact and confident communication through vocal control training.

Day 03 Mock Interviews: Participated in practice sessions to boost interview confidence.

Day 04 Teamwork: Engaged in group discussions to practice sharing ideas and active listening.

Day 05 Personality Development: Focused on "looking sharp," confident body language, and maintaining a positive attitude

Week 06

Day 1 (CV Day):

Attended a workshop on how to write a good CV. Learned what to include and what to avoid.
Created my own professional CV.

Day 2 (Presentation Day):

Learned tips for public speaking. Practiced speaking in front of my group.
Worked on my body language and confidence

Day 3 (Writing Day):

Started writing my internship report. Made an outline with all the main points.
Wrote the introduction and first few sections.

Day 4 (Editing Day):

Read through my report to find errors. Fixed grammar and spelling mistakes.
Improved the sentences to make them clearer.

Day 5 (Feedback Day):

Showed my report to my supervisor. Received helpful feedback.
Made the final changes and submitted it.

Conclusion:

focused on building my professional skills. I learned how to present myself better with a CV and in person. I also learned how to write and edit a formal report, which is a very useful skill.

Nongovernmental Organization (NGO); Definition and How It Works

What are the Key Components of Power BI

About Us Hope foundation

Education Hope foundation

Microsoft Power BI - Wikipedia

What are the Key Components of Power BI

What is Power BI? - Power BI | Microsoft Learn

NGO's: Introduction, functions, Importance

CONCLUSION

During this internship, I used Power BI to turn raw NGO data into clear, interactive dashboards. This helped the team see trends and make better, data-backed decisions. This experience improved my technical skills and showed me how data can drive real social impact.

SUGGESTIONS

Automate Data: Connect all surveys and databases directly to Power BI to save time and prevent mistakes.

Custom Views: Create simple, separate dashboards for donors, managers, and field staff so everyone sees what matters to them.

Staff Training: Hold quick workshops so the whole team feels comfortable reading and using the data reports.

Live Updates: Use "Real-Time" tracking to see exactly what's happening in the field as it happens.

Measure Success: Build models that compare "before and after" stats to prove the NGO's long-term impact on the community.

Week: 01

Date	Log In	Log Out	Description	Guide sign	HR sign	Principal sign.
19-01-2026	2:00pm	4:00pm	Day 01: Learned about Power BI. Overview of Power BI. Installation & Interface. Hope Foundation introduction. & Understanding of the fundamental environment & purpose of Power BI	Sadiqa		
20-1-2026	2:00pm	4:00pm	Day 02: Acquired knowledge of data source navigation. & Power BI Desktop Tools with the Power BI interface.	Sadiqa		
21-1-2026	2:00pm	4:00pm	Day 03: Acquired knowledge of data import methods & learnt how to import Excel data related to foundation activities.	Sadiqa		

Date	Log In	Log Out	Description	Guide Sign	HR Sign	Principal Sign
22-01-2026	2:00pm	4:00pm	Day 04: Learnt data transformation techniques & used Power Query Editor to clean data.	Sadiqa		
23-01-2026	2:00pm	4:00pm	Day 05: Missing values were handled & duplicates were eliminated. Enhanced data quality abilities made simple charts [bars, column, & Pie] learnt basic data virualization.	Sadiqa		

Week : 02.

Date	Log In	Log Out	Description	Guide Sign	HR Sign	Principal Sign
27-01-2026	2:0pm	4:0pm	Day 01 : worked only on the first level chart components & learnt the fundamentals of chart structure while doing basic chart visualization.	Sadiq		
28-01-2026	2:0pm	4:0pm	Day 02 : Enhance understanding of multiline charts by practicing chart visualization with the first two component lines & comparison elements.	Sadiq		
30-01-2026	2:0pm	4:0pm	Day 03 : Applied visualization ideas by practically solving the given Question & creating charts using the data provided.	Sadiq		
02-01-2026	2:0pm	4:0pm	Day 04 : Understanding of data modeling. The concept & its importance, the goal of data modeling The field of learnt, tables, main & foreign Keys [i.e primary & foreign]	Sadiq		
03-02-2026	2:0pm	4:0pm	Day 05 : focused on One-to many & many-to one relationship [fact, table & dimensional table] practiced.	Sadiq		

Week : 03

Date	Log In	Log Out	Description	Guide Sign	HR Sign	Principal Sign	D
04-02-2026	2:0pm	4:0pm	Day 01 : Learnt about normaliyed modeling techniques & practised the star & Snowflake schema models.	Sadiqa			11-02
05-02-2026	2:0pm	4:0pm	Day 02 : Overview of DAX formulas & calculated fields. Comprehension of DAX's goal & acquisition of fundamental calculation techniques.	Sadiqa			
06-02-2026	2:0pm	4:0pm	Day 03 : Created, calculated columns & measures using DAX, exercised basic DAX formulas [SUM, COUNT, AVERAGE] & applied DAX in a data model.	Sadiqa			12-
09-02-26	2:0pm	4:0pm	Day 04 : Created calculated columns & used model view to practice the fundamental DAX formula modelling practically	Sadiqa			16- 17-
10-02-2026	2:0pm	4:0pm	Day 05 : Enhanced model accuracy, verified relationship & fixed joins.	Sadiqa			

Week :04

Principal Sign	Date	Log In	Log Out	Description	Guide Sign	HR Sign	Principal Sign.
	11-02-26	2:0pm	4:0pm	Day:01: Measures were built using modele table & linked to calculations using a variety of formulas [MIN, MAX, COUNT, LEN, DISTINCT COUNT, CONCATE-NATE]	Sadiqa		
	12-02-26	2:0pm	4:0pm	Day 02: Conditional DAX formulas using the IF, AND, & OR functions were practiced Enhanced conditional calculation & learned multi-conditional logic.	Sadiqa		
	16-02-26	2:0pm	4:0pm	Day 03: Enhanced DAX formula skills & used IF&OR operations to solve a practice problems.	Sadiqa		
	17-02-26	2:0pm	4:0pm	Day 04: Understood time-based measures & cumulative in Calculati-ions. learnt & practiced DAX time intelligence furtions, MTD[month-To-Date] & YTD [Year-To-Date]	Sadiqa		

Date	Log In	Log Out	Description	Guide Sign	HR Sign	Principal Sign
18-02-26	2:0pm	4:0pm	Day 05: After the assignment was allocated, we received great advice & assistance from internal & external advisors, which enabled us to examine & improve our logbook's entries & accuracy.	Sadiqa		

Week - 06.

Date	Log In	Log Out	Description	Guide Sign	HR Sign	Principal Sign.
27-02-26	2:0pm	4:0pm	Day 01: CV Day Learned how to create & write a professional CV and created my own.	Sadiya		
02-03-26	2:0pm	4:0pm	Day 02: Presentation Day. practied public speaking, body language, & gave a short talk.	Sadiya		
03-03-26	2:0pm	4:0pm	Day 03: Writing Day. started my internship report & organized all the main points	Sadiya		
04-03-26	2:0pm	4:0pm	Day 04: Editing Day. Finished the report. Fixed mistakes, & practiced presenting it.	Sadiya		
05-03-26	2:0pm	4:0pm	Day 05: Feedback Day wrap-up day: Submitted my report and focused on self improvement.	Sadiya
